Valentines Practice

NAME _____

Taking Aim - a linear graphing activity

1. Cupid has fired off 4 arrows, each following a different, straight path.

ARROW 1

$$y = 2x - 2$$

ARROW 2

$$y = -2x + 2$$

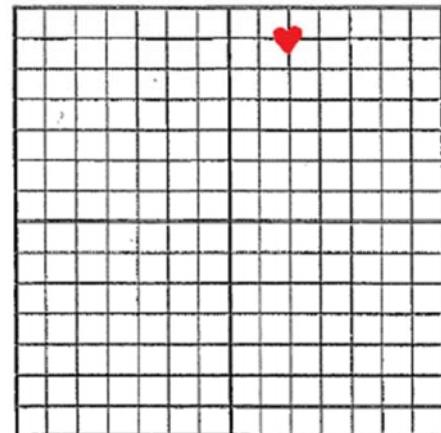

ARROW 3

$$y = -2x - 2$$

ARROW 4

$$y = 2x + 2$$

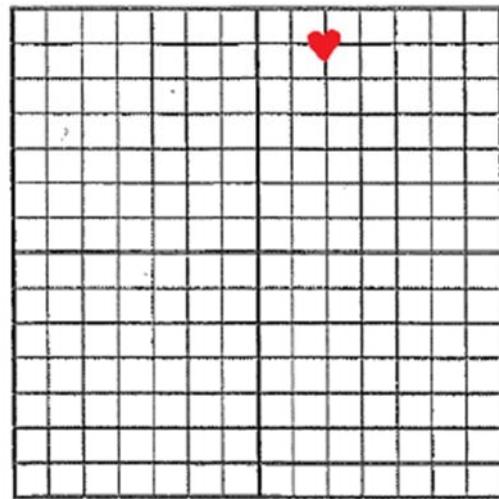

1a. Which arrow(s) will pass through the heart?

1b. Explain your reasoning and/or method.

2. Cupid fires a 5th arrow which passes through the following coordinates.

x	y
-1	-3
0	0
1	3
2	6

2a. Sketch the linear path of the 5th arrow on the graph above.

2b. Write a linear equation that represents the path of the 5th arrow.

2c. Explain your reasoning and/or method.

*Text 6.1 Representing Patterns

6.1

Representing Patterns

Focus on...

After this lesson, you will be able to...

- represent pictorial, oral, and written patterns with linear equations
- describe contexts for given linear equations
- solve problems that involve pictorial, oral, and written patterns using a linear equation
- verify linear equations by substituting values

Emma Lake, Saskatchewan

A skiff is a two-person sailing boat that can be used for racing. The carbon foam sandwich hull and multiple sails allow the boat to travel at speeds of 5 to 35 knots.

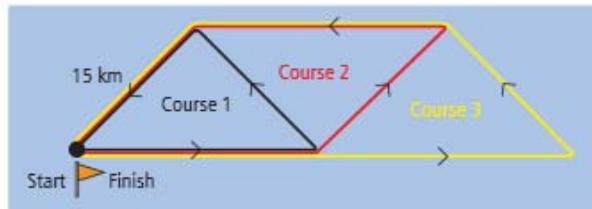

Did You Know?

A knot is a measure of a boat's speed. One knot is equal to 1.852 km/h. The term comes from the time when sailors measured the speed of a ship by tying knots an equal distance apart on a rope. The rope was gradually let out over the back of the ship at the same time that an hourglass was tipped. The sailors counted the number of knots that were let out until the sand ran out in the hourglass.

Materials

- ruler
- coloured pencils

Explore Patterns

The first three racing courses are shown for a class of skiffs. Each leg of the course is 15 km.

How could you determine the total distance of each racing course? Describe different strategies you could use to solve this problem.

1. Draw what you think the next two courses might look like.
2. Organize the information for the first five courses so that you can summarize the results.
3. a) Describe the pattern in the race course lengths. Then, check that your Courses 4 and 5 fit the pattern.
b) Describe the relationship between the course number and the length of the course.
4. Write an equation that can be used to model the length of the course in terms of the course number. Explain what your variables represent.

Reflect and Check

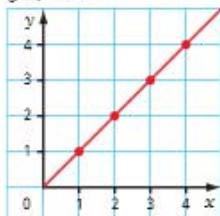

5. a) What are two methods you could use to determine the length of Course 9?
b) Which method do you prefer? Explain why.
6. a) Determine which course is 135 km long.
b) Determine the length of Course 23.
c) How did you determine the answers to parts a) and b)?
d) Discuss your solutions with a classmate.

Link the Ideas

Literacy Link

A linear relation is a relation that appears as a straight line when graphed.

A linear equation is an equation whose graph is a straight line.

Strategies

Look for a Pattern

Tech Link

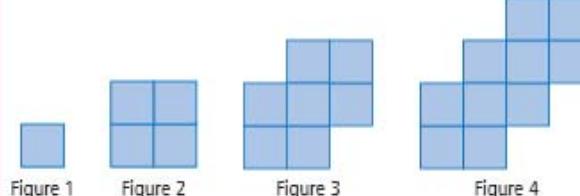

You can use a spreadsheet program to create a table.

Literacy Link

In the equation $s = 3n - 2$,

- the numerical coefficient is 3
- the variables are s and n
- the constant is -2

Example 1: Describe a Pictorial Pattern Using a Linear Equation

- Describe the pattern.
- Create a table of values to represent the linear relation between the number of squares and the figure number for the first four figures.
- Write a linear equation to represent this pattern.
- How many squares are in Figure 12?
- Which figure number has 106 squares? Verify your answer.

Solution

- The pattern is increasing. Each figure has three more squares than the previous figure. The squares have been added to the upper right corner of the previous pattern.

b)

Figure Number, n	Number of Squares, s
1	1
2	4
3	7
4	10

- Add two columns to the table to help determine the pattern.

Figure Number, n	Number of Squares, s	Pattern	
		Multiply n by 3	Subtract 2 From Result
1	1	3	1
2	4	6	4
3	7	9	7
4	10	12	10

The number of squares, s , increases by 3 for each figure number, n . Multiplying the figure number, n , by 3 results in 2 more than the number of squares. Therefore, subtracting 2 from $3n$ equals the number of squares, s .

The equation is $s = 3n - 2$.

d) Substitute $n = 12$ into the equation and solve for s .

$$\begin{aligned}s &= 3(12) - 2 \\&= 36 - 2 \\&= 34\end{aligned}$$

There are 34 squares in Figure 12.

e) Substitute $s = 106$ into the equation and solve for n .

$$\begin{aligned}106 &= 3n - 2 \\106 + 2 &= 3n - 2 + 2 \\108 &= 3n \\108 &= \frac{3n}{3} \\36 &= n\end{aligned}$$

How else could you solve the problem?

The solution is $n = 36$.

Check:

$$\begin{aligned}\text{Left Side} &= 106 & \text{Right Side} &= 3n - 2 \\& & &= 3(36) - 2 \\& & &= 108 - 2 \\& & &= 106\end{aligned}$$

Left Side = Right Side

The solution is correct. Figure 36 has 106 squares.

Show You Know

a) Write an equation to represent the number of circles in relation to the figure number.

Figure 1

Figure 2

Figure 3

Figure 4

b) How many circles are in Figure 71? Explain how you determined the answer.

c) Which figure number has 83 circles? How did you arrive at your answer?

Strategies

Use a Variable

Example 2: Describe a Written Pattern Using a Linear Equation

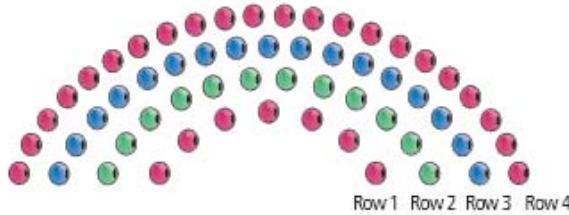

A bead design for a necklace has an arc shape:

- Row 1 has seven red beads.
- Row 2 has five additional beads and all the beads are green.
- Row 3 has five additional beads and all the beads are blue.
- The pattern repeats. Five beads are added to each successive row.

- a) Draw the pattern for the first four rows.
- b) Make a table of values showing the number of beads in relation to the row number.
- c) What equation shows the pattern between the row number and the number of beads in the row?
- d) How many beads are in Row 4? Explain how to check your answer.
- e) How many beads are in Row 38?
- f) If the bead pattern were continued, which row number would have 92 beads? How did you determine the answer?

Solution

a)

Row 1 Row 2 Row 3 Row 4

b)

Row Number, n	Number of Beads, b
1	7
2	12
3	17
4	22

- c) Add two columns to the table to help determine the pattern.

Row Number, n	Number of Beads, b	Pattern	
		Multiply n by 5	Add 2 to Result
1	7	5	7
2	12	10	12
3	17	15	17
4	22	20	22

The equation is $b = 5n + 2$.

Look at the diagram of the pattern. In the equation, what does the 5 mean? What does the 2 mean?

d) Count the number of beads in Row 4. There are 22 beads. You can check this by substituting $n = 4$ into the equation and solving for b .

$$\begin{aligned}b &= 5n + 2 \\&= 5(4) + 2 \\&= 20 + 2 \\&= 22\end{aligned}$$

There are 22 beads in Row 4.

e) Substitute $n = 38$ into the equation and solve for b .

$$\begin{aligned}b &= 5n + 2 \\&= 5(38) + 2 \\&= 190 + 2 \\&= 192\end{aligned}$$

There are 192 beads in Row 38.

How else could you solve the problem?

What colour are the beads in Row 38? Explain how you know.

f) Substitute $b = 92$ into the equation and solve for n .

$$\begin{aligned}92 &= 5n + 2 \\92 - 2 &= 5n + 2 - 2 \\90 &= 5n \\90 &= \frac{5n}{5} \\18 &= n\end{aligned}$$

The solution is $n = 18$.

Check:

$$\begin{aligned}\text{Left Side} &= 92 & \text{Right Side} &= 5n + 2 \\& & &= 5(18) + 2 \\& & &= 90 + 2 \\& & &= 92\end{aligned}$$

Left Side = Right Side

The solution is correct. Row 18 has 92 beads.

Show You Know

In a banquet hall, a single rectangular table seats six people. Tables can be connected end to end as shown. Four additional people can be seated at each additional table of the same size.

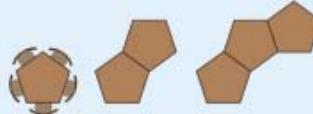

a) What linear equation could represent this situation? Share with a classmate how you determined the equation.

b) How many tables connected together will seat 26 people?

Key Ideas

- Many pictorial and written patterns can be represented using a table of values or a linear equation.

The pentagonal table can seat five people. The tables can be connected to form longer tables.

Number of Tables, t	Number of Sides, s	Pattern: Multiply t by 3 and Add 2
1	5	5
2	8	8
3	11	11

The equation that models the pattern is $s = 3t + 2$.

- Linear equations can be verified by substituting values.

Substitute $t = 3$ into the equation:

$$\begin{aligned}s &= 3(3) + 2 \\ &= 9 + 2 \\ &= 11\end{aligned}$$

The calculated value matches the value in the table.

Check Your Understanding

Communicate the Ideas

1. a) Explain how to develop a linear equation to represent this pattern.

b) What is the equation? Explain what each variable represents.

c) Compare your equation with one of a classmate's.

2. Christina and Liam work in a shoe store and earn a flat rate of \$35/day plus \$6.25 for every pair of shoes they sell. Each got a different value for how much they would earn after selling eight pairs of shoes.

Christina:

I substituted $p = 8$ into the equation $w = 6.25p + 35$. When I solved for w , I got \$85.

Liam:

I substituted $p = 8$ into the equation $w = 6.25p$. When I solved for w , I got \$50.

Who is correct? Explain how you know. What mistake did the other person make?

3. Describe to a partner how you could determine the ninth value in the following number pattern: 4, 7.5, 11, 14.5, 18,

Practise

For help with #4 to #6, refer to Example 1 on pages 212–213.

4. a) Describe the relationship between the number of regular octagons and the number of sides in this pattern.

b) Make a table of values showing the number of sides for each figure in relation to the number of octagons.
c) Write an equation to model the number of sides of each shape. Explain what each variable represents.
d) How many sides would a shape made up of 17 octagons have?
e) How many octagons are needed to make a figure with 722 sides?

5. a) Make a table of values to show the number of circles in relation to the figure number.

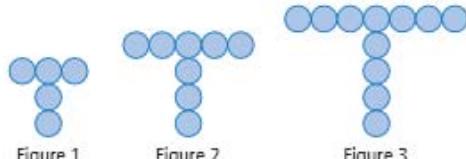

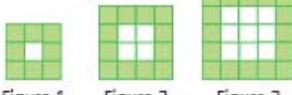

Figure 1 Figure 2 Figure 3

b) Describe the relationship between the number of circles and the figure number.
c) Develop an equation that can be used to determine the number of circles in each figure. Explain what each variable represents.
d) How many circles are in Figure 17?
e) Which figure number has 110 circles?

6. Laura used green and white tiles to create a pattern.

a) Make a table of values to show the number of green tiles in relation to the figure number.

b) Describe the relationship between the number of green tiles and the figure number.
c) Develop an equation to model the number of green tiles. Explain what each variable represents.
d) How many green tiles are in Figure 24?
e) Which figure number has 176 green tiles? Verify your answer.

For help with #7 to #9, refer to Example 2 on pages 214–215.

7. Matt created the following number pattern: 7, 16, 25,

a) Make a table of values for the first five terms.
b) Develop an equation that can be used to determine the value of each term in the number pattern.
c) What is the value of the 123rd term?
d) Which term has a value of 358?

8. The figure shows two regular heptagons connected along one side. Each successive figure has one additional heptagon. Each side length is 1 cm.

a) Draw the first six figures. Then, describe the pattern.
b) Make a table of values showing the perimeter for the first six figures.
c) What equation can be used to determine the perimeter of each figure? Identify each variable.
d) What is the perimeter of Figure 12?
e) How many heptagons are needed to create a figure with a perimeter of 117 cm?

Literacy Link

A regular heptagon has seven sides of equal length.

9. Jessica created a number pattern that starts with the term -5 . Each subsequent number is 3 less than the previous number.

- Make a table of values for the first five numbers in the pattern.
- What equation can be used to determine each number in the pattern? Verify your answer by substituting a known value into your equation.
- What is the value of the 49th term?
- Which term has a value of -119 ? Verify your answer.

10. What linear equation models the relationship between the numbers in each table?

a)

x	y
0	13
1	16
2	19
3	22

b)

r	p
0	17
1	24
2	31
3	38

c)

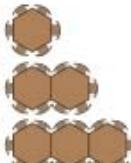

k	t
1	-1.3
2	1.4
3	4.1
4	6.8

d)

f	w
1	-0.5
2	-4
3	-7.5
4	-11

Apply

11. Rob is in charge of arranging hexagonal tables for a parent-night presentation. The tables, which can seat six people, can be connected to form longer tables.

- Develop an equation to model the pattern. Identify each variable.
- How many parents can be seated at a row of five tables?
- Check your answer for part b). Show your work.
- A group of 30 people want to sit together. How many tables must be joined together to seat them?

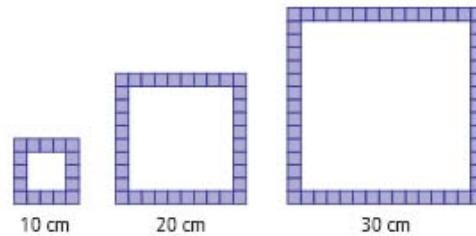

12. A school pays a company \$125 to design gym T-shirts. It costs an additional \$15 to make each T-shirt.

- Copy and complete the table of values.

Number of T-Shirts	Cost (\$)
0	125
5	200
10	
15	
35	
	950

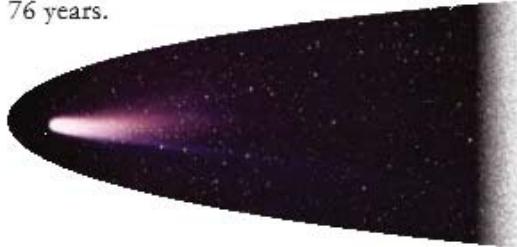

- Develop an equation to determine the cost of the T-shirts. Explain the meaning of the numerical coefficient.
- What would it cost to make 378 T-shirts?
- If the school store has a budget of \$2345 for T-shirts, how many T-shirts can be ordered?

13. An art store sells square picture frames with a border of tiles that each measure 2 cm by 2 cm. The smallest frame is 10 cm by 10 cm and requires 16 tiles.

- Develop an equation to determine the number of tiles required for each size of frame.
- How many tiles are needed to make a frame that is 30 cm by 30 cm?
- What are the dimensions of a square frame made with 196 tiles?

14. Edmund Halley, after whom Halley's comet was named, predicted that the comet would appear in 1758. The comet appears approximately every 76 years.

- a) Use a table to show the years of the next six sightings after 1758.
- b) When will Halley's comet appear in your lifetime?
- c) Write an equation that can be used to predict the years when Halley's comet will appear.
- d) Will Halley's comet appear in the year 2370? How did you arrive at your answer?

Science Link

A comet, which is made of frozen gas and dust, orbits around the sun. The dust tail of a comet can be up to 10 000 000 km long. This is 2.5 times as great as the average distance from Earth to the moon.

Math Link

You are in charge of developing a racing course for a sailboat race on Lake Diefenbaker, in Saskatchewan. Five classes of sailboats will race on courses that are the same shape, but different lengths.

- a) Design a racing course based on a regular polygon. The shortest course must be at least 5 km long. The longest course must be no longer than 35 km.
 - Draw and label a diagram of the racing course. Show at least the first four courses. Record the total length of each course.
- b) Develop a linear relation related to your racing course.
 - Make a table of values.
 - Develop a linear equation that represents the relationship between the course number and the course distance.
- c) Develop a problem related to your racing course. Provide the solution and verify it.

Extend

15. Find the pattern that expresses all the numbers that are 1 more than a multiple of 3.

- a) What is the 42nd number?
- b) How can your pattern test to see if 45 678 is 1 more than a multiple of 3?

16. a) A landscaper is planting elm trees along a street in a new subdivision. If elm trees need to be spaced 4.5 m apart, then how long is a row of n elm trees? Write the equation.

b) The street is 100 m long. If the landscaper wants to line the street on both sides with elm trees, how many trees will be needed? Will the trees be evenly spaced along the entire street?

17. A ball is dropped from a height of 2 m. The ball rebounds to $\frac{2}{3}$ of the height it was dropped from. Each subsequent rebound is $\frac{2}{3}$ of the height of the previous one.

- a) Make a table of values for the first five rebound heights in the pattern.
- b) What is the height of the fourth rebound bounce?
- c) Is this a linear relation? Explain how you know.

6. 1 Representing Patterns

Prescribed Learning Outcomes (PLO'S):

- Write a linear expression representing a given pictorial, oral, or written pattern
- Write a linear equation to represent a given context
- Describe a context for a given linear equation
- Solve using a linear equation, a given problem that involves pictorial, oral, and written linear patterns
- Write a linear equation representing the pattern in a given table of values and verify the equation by substituting values from the table
- Determine, by substitution, whether a given rational number is a solution to a given linear equation

Terminology

Linear patterns: a sequence of numbers in which the pattern only involves addition or subtraction.

Common Difference d : is the difference between any two consecutive numbers in a linear pattern.

Observing a Pattern

Draw the Figure 5 by continuing the pattern shown below. How is the number of circles related to the figure number? Show the relationship in a table.

Figure 1

Figure 2

Figure 3

Figure 4

Figure 5

Figure #	# of circles
1	1
2	3
3	5
4	7
5	9
6	11

What do you notice as we move from figure to figure? What is changing? How is it changing? Look at the table. Do you see any patterns?

- One ball added to each layer
- $\rightarrow +2$ each figure

Make a new table of values. This time multiply the figure # by the change in the number of circles and put this on the left-hand side of your table. The right-hand side should stay the same. What can you see now?

Fig #	$(Fig \#)(+2)$	# of circles
1	2	1
2	4	3
3	6	5
4	8	7
5	10	9

$$nd - 1 = C$$

$$n = \text{Figure \#}$$

$$d = \text{common difference}$$

$$C = \text{\# of circles}$$

pattern: mult by 2 and sub 1

Write an equation relating:

the figure # (call it "N") and

the # of circles (call it "C")

$$N \times 2 - 1 = C$$

$$2N - 1 = C$$

In general
 $N \cdot d + \text{constant} = C$

How can we use the equation to predict other data?a) How many circles are in Figure 71?

$$N = 71$$

$$2(71) - 1 = C$$

$$141 = C$$

in Fig. 71 there are 141 circles

in Fig. 30: How many circles?
 $2(30) - 1 = 59$ circles.b) Which figure number has 83 circles?

$$C = 83$$

$$N = ?$$

$$2N - 1 = 83$$

$$2N = 84$$

$$N = 42$$

 $\rightarrow N = 42 \rightarrow$ Fig 42 has 83 circles

#2) Number Patterns

Term # 1 2 3 4
25, 21, 17, 13, ...

+29

#2) Number Patterns

a) Make a table of values for the first five terms. Use the table to create the equation for this pattern.

$-4 \cdot N$	Term #	Term value
-4	1	25
-8	2	31
-12	3	17
-16	4	13
-20	5	9

$$-4N + 29 = V$$

pattern: multiply by -4 and add 29

b) Use the equation to answer the following:

i. What is the value of the 11th term?

$$N=11$$

$$\begin{aligned}-4(11) + 29 &= V \\ -44 + 29 &= V \\ -15 &= V\end{aligned}$$

The 11th term has a value of -15

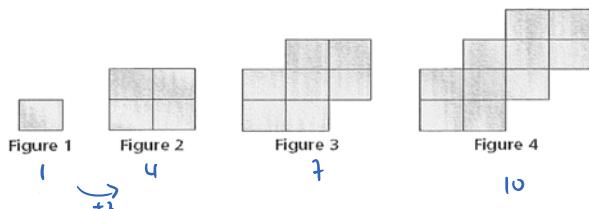

ii. Which term has the value of -47 ?

$$V = -47$$

$$\begin{aligned}
 -4N + 29 &= -47 \\
 -4N &= -47 - 29 \\
 -4N &= -76 \\
 N &= 19
 \end{aligned}$$

Term 19 has a value of -47

#3)

a) Describe the pattern in the figures above. *add 3*

b) Create a table of values to represent the figure number and the number of squares for the first 4 figures.

Figure Number	Number of Squares
1	4
2	7
3	10
4	13

$$N=12 \quad 3(12) - 2 = 9$$

$$N=12 \quad 3(12) - 2 = q \quad \begin{cases} q = 34 \\ 36 - 2 = q \end{cases} \quad \text{Fig 12 has } 34 \text{ sides}$$

e) Which figure number has 106 squares?

$$g = 106$$

$$3N - 2 = 106$$

$$3N = 108$$

$$N = 36$$

Fig 36 has 108 squares.

Homework: p. 217 #4 (b, c, d, e), 5 & 6 (a, c, d, e), 7, 9, 10, 14 (a, b, c) $dN \pm \sim =$

today

next class

- ① Find the difference from one term/figure to the next (d)
- ② Multiply "d" onto "N", the figure number
- ③ relate $d \cdot N$ to final # in figure (V) $\rightarrow \pm \text{---}$
- ④ create an equation

1st More Practice (pg 4)

1) Determine the common difference of the following linear patterns and use it to find the next 3 numbers.

a) $5, 8, 11, 14, \dots$
 $\begin{array}{r} 5 \\ +3 \\ 8 \\ +3 \\ 11 \\ +3 \\ 14 \end{array}$

b) $-5, 1, 7, 13, \dots$
 $\begin{array}{r} -5 \\ +6 \\ 1 \\ +6 \\ 7 \\ +6 \\ 13 \end{array}$

$17, 20, 23 \checkmark$

$19, 25, 31 \checkmark$

2) Write an equation relating C to n . (Verify it works for every pair of values)

	n	1	2	3	4
$d \cdot n$	C	5	8	11	14

$\begin{array}{r} 1 \\ 2 \\ 3 \\ 4 \\ 5 \\ 6 \\ 7 \\ 8 \\ 9 \\ 10 \\ 11 \\ 12 \\ 13 \\ 14 \end{array}$

$3n + 2 = C$

$d \cdot n$	-6	-12	-18	-24
n	1	2	3	4
C	-5	-11	-17	-23

$\begin{array}{r} -6 \\ -6 \\ -6 \\ -6 \\ -6 \\ -6 \\ -6 \\ -6 \\ -6 \\ -6 \\ -6 \\ -6 \end{array}$

$-6n + 1 = C$

3) Determine the 30th number in the following linear pattern. Write the equation first.

$d \cdot n$	n	V
5	1	-8
10	2	-3
15	3	2
20	4	7

$\begin{array}{r} 5 \\ 10 \\ 15 \\ 20 \\ 25 \\ 30 \end{array}$

$eq^n: 5n - 13 = V$

$n = 30^{\text{th}}: 5(30) - 13 = V$
 $137 = V$

4) The fare for a taxi ride is \$1.50 per kilometre plus a fixed cost of \$2.40.

$n = \# \text{ of km}$ $C = \text{cost for taxi ride}$

a) Write an equation for the fare F in terms of the fixed cost and the cost per n kilometres.

$\$1.50n + \$2.40 = C$

$\$18.90$

b) What is the fare for an 11km ride?

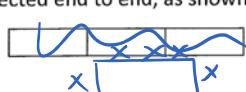

$n = 11$

20 km

c) If your cost was \$32.40, how many km was the ride?

$C = \$32.40$

1. A banquet table seats 8 people, three on each side, and two at the ends. Tables can be connected end to end, as shown.

a) How many additional people can be seated when a table is added?

$1 - 8 = 7$
 $2 - 14 = 6$
 $3 - 20 = 6$
 $4 - 26 = 6$

$6n$

n	P
1	8
2	14
3	20
4	26

b) Make a table to show how many people can sit at 1-4 tables.

$3 - 20 = 6$
 $4 - 26 = 6$

c) Find a pattern and write an equation. Use n for the number of tables and P for the number of people.

$6n + 2 = P$

d) Use your equation to determine how many people can be seated at 10 tables.

$6(10) + 2 = 62$ people seated @ 10 tables

e) How many tables are needed to seat 344 people?

$6n + 2 = 344$
 $\frac{6n}{6} + \frac{2}{6} = \frac{344}{6}$
 $n = 57$ tables for 344 people

Practice pg 217
7, 9, 10, 14

+
extra practice on
website

$$\frac{6N+2}{2} = 344$$

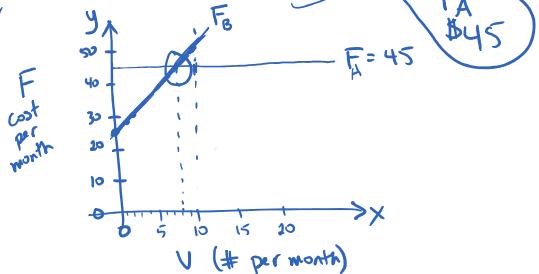

$$\frac{6}{2}N + \frac{2}{2} = 344$$

$$N = 57$$

57 tables for 344 people

2. Joseph is considering two different payment plans for his gym membership. **Plan A** charges a flat fee of \$45.00 each month. **Plan B** charges a flat fee of \$25.00 each month plus \$2.50 per visit.

a) Write a linear relation to represent each plan
b) Graph the two linear relations
c) Use the graph to help you identify after how many visits at what month the two plans would have the same cost
d) If Joseph planned to visit the gym 10 times per month, which plan would cost less? How much would it cost him?

$$F_B = 25 + 2.5V$$

V	F_B
0	25
1	27.50
2	30
10	50

Where the 2 lines meet is where the costs are equal, which happens @ 8 visits.

pg 217 # 7, 9, 10, 14

$n \cdot d$	Sighting #	year
76	1	1758
152	2	1834
228	3	1910
304	4	1986
380	5	2062
456	6	2138

$\downarrow d = +76$

sighting # starting at 1 in 1758

$$76n + 1682 = y$$

$$76n + 1682 = 2370$$

$$-1682 \quad -1682$$

$$\frac{76n}{76} = \frac{688}{76}$$

$$n = 9.05$$

Not an exact #
so no Halley's comet
in 2370

*Text 6.2 Interpreting Graphs

Friday, June 25, 2010 10:19 AM

6.2

Interpreting Graphs

Focus on...

After this lesson, you will be able to...

- describe patterns found in graphs
- extend graphs to determine an unknown value
- estimate values between known values on a graph
- estimate values beyond known values on a graph

Richard is paid a daily salary and commission to sell riverboat cruises.

As a salesperson, he recognizes that it is important to know his sales in order to determine his commission. He is considering using a graph to calculate this amount. What do the variables p and s represent? What other information does the graph provide?

Literacy Link

Commission is a form of payment for services. Salespeople who earn commissions are paid a percent of their total sales. For example, a clothing store might pay a commission of 10% of sales.

Literacy Link

On the graph, the line joining the points shows that the data are *continuous*. This means that it is reasonable to have values between the given data points.

Explore Using a Graph to Solve Problems

Richard is paid \$64/day plus a commission of 10% of sales for selling riverboat cruises.

1. The table provides some information about his sales and daily pay.

Day	River Cruises Sold (\$)	Pay for the Day (\$)
Monday	1500	214
Tuesday	1250	
Wednesday	800	
Thursday	0	64
Friday	2010	

- a) On the graph, locate the data points for each day.
- b) How could you use the graph to estimate the missing values on the table? Try your method.

2. a) Estimate how much Richard must sell to earn \$300 in one day.
Describe your strategy.

b) Estimate how much Richard would earn if he had sales of \$1150.
Describe your strategy.

3. The graph represents the linear equation $p = \frac{s}{10} + 64$. How could you use this information to determine the answers to #2? Explain why your strategy is effective.

Reflect and Check

4. a) Explain how your graph helped you to answer #2.

b) Discuss your strategies with a classmate.

5. Work with a partner and use your graph.

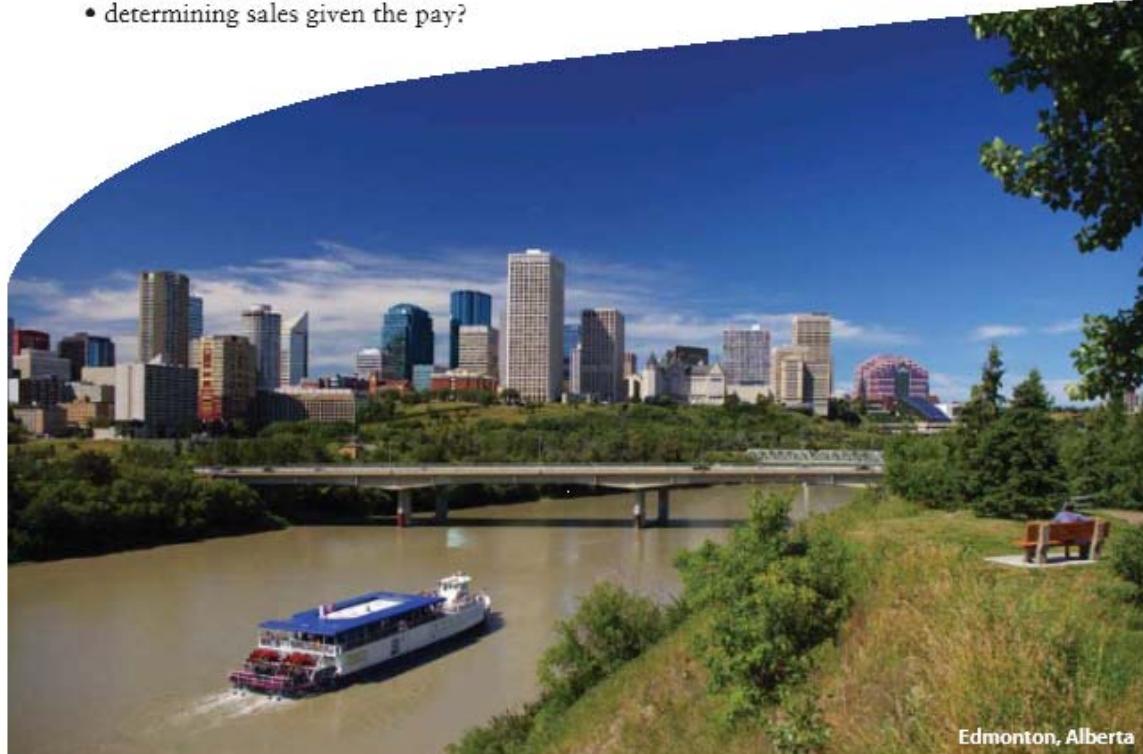

a) How much would Richard earn if he had sales of \$2400?

b) How much must Richard sell to earn \$175 in one day?

6. a) List an advantage and a disadvantage of using a graph and an equation to determine values.

b) Which method is more effective when

- estimating pay given the sales?
- determining sales given the pay?

Edmonton, Alberta

Link the Ideas

Example 1: Solve a Problem Using Interpolation

A weather balloon recorded the air temperature at different altitudes. The data approximately represent a linear relationship.

interpolate

- estimate a value between two given values
- interpolation should be used only when it makes sense to have values between given values. For example, 5.4 people does not make sense.

Literacy Link

When describing variables on a graph, express the y -variable in terms of the x -variable. For example, the graph shows the relationship between temperature and altitude.

Tech Link

You can use a spreadsheet program to create the graph.

Strategies

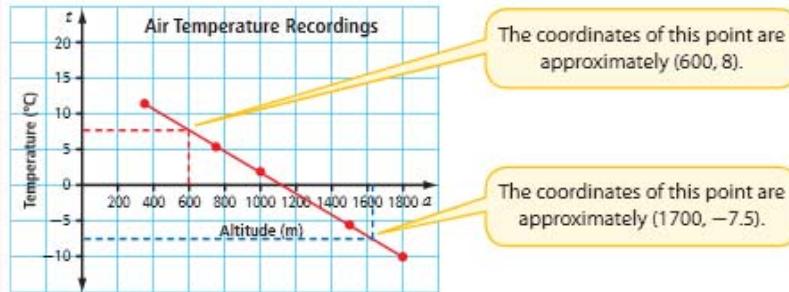

Estimate and Check

Altitude, a (m)	350	750	1000	1500	1800
Temperature, t ($^{\circ}$ C)	11.4	5.7	2.1	-5.0	-10.0

- Interpolate the approximate value for the air temperature when the balloon was at a height of 600 m.
- What was the approximate altitude of the balloon at an air temperature of -7.5 $^{\circ}$ C?
- Is it possible to interpolate the precise value for the air temperature when the altitude is 1050.92 m? Explain.

Solution

Graph the data. Since temperature change is continuous, you can draw a straight line to connect the data points.

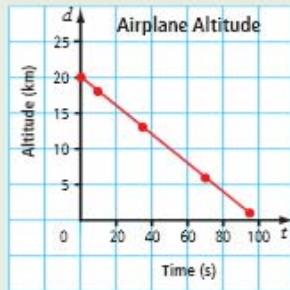

- On the graph, draw a vertical line from 600 to the point where the line intersects the graph. From the intersection point, draw a horizontal line to the y -axis. The value where the horizontal line meets the y -axis is approximately 8.
- On the graph, draw a horizontal line from -7.5 to the point where the line intersects the graph. From the intersection point, draw a vertical line to the x -axis. The value where the vertical line meets the x -axis is approximately 1700.
- No, you cannot interpolate a precise value. The temperature is related to altitude values to the nearest 50 m. There is too much uncertainty to accurately predict temperatures based on altitude measurements that have a precision of $\frac{1}{100}$ of a metre. You could, however, estimate the temperature for an altitude of between 1000 m and 1100 m.

Show You Know

This graph shows a plane's altitude as it lands. The relationship between altitude and time is approximately linear.

- What was the plane's approximate altitude at 50 s?
- At what time was the plane's altitude approximately 11 km?
- Is it appropriate to join the points with a straight line? Explain.

Example 2: Solve a Problem Using Extrapolation

Anna is kayaking up the east coast of the Queen Charlotte Islands toward Graham Island.

Anna's course is shown by the red arrow on the map.

- If Anna continues on her present course, **extrapolate** the values of the coordinates for latitude and longitude where she will land.
- Could you use extrapolation to estimate where Anna sailed from? Explain.

extrapolate

- estimate a value beyond a given set of values
- extrapolation should be used only when it makes sense to have values beyond given values

Did You Know?

The Queen Charlotte Islands or Haida Gwaii consist of two main islands off the northwest coast of British Columbia. In addition to Graham Island and Moresby Island, there are approximately 150 smaller islands.

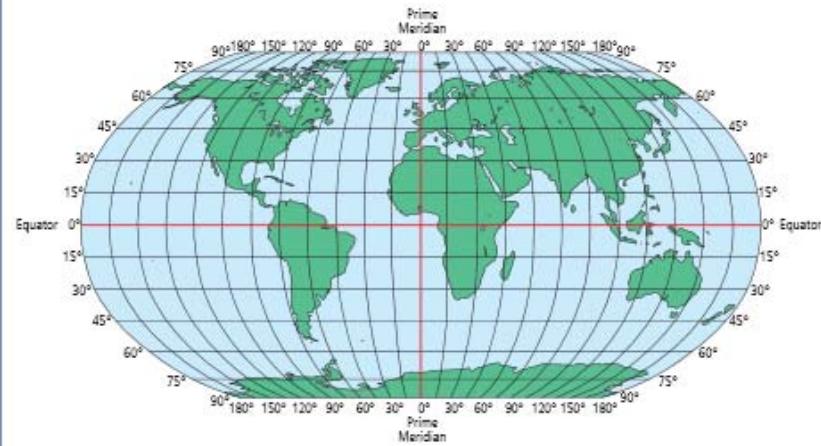

Solution

a) Extend the line that represents the course until it touches land, and then read the coordinates of the point. From the map, the coordinates where Anna will land are approximately 53.8° north latitude and -131.8° west longitude.

b) No, the line extended in the direction that Anna sailed from does not strike land. This is evidence that this extended line does not show the place where she started.

Literacy Link

Latitude and longitude is the most common grid system used for navigation.

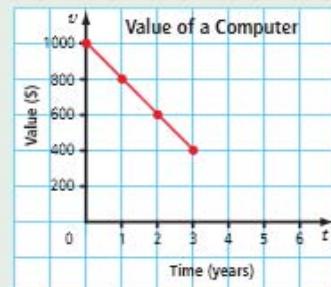

- Each degree of latitude is approximately 111 km apart.
- Each degree of longitude varies from 0 to 111 km. A degree of longitude is widest at the equator and gradually decreases at the poles.

An example of a coordinate reading from a Canadian location might be 61° north latitude and -139° west longitude.

Show You Know

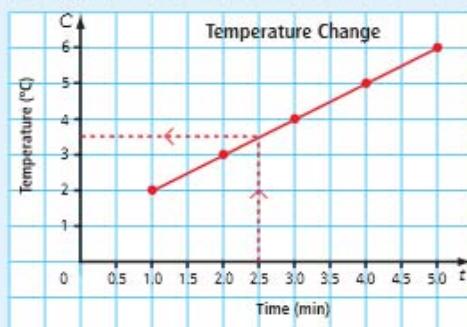

The value of a computer decreases over time. The graph shows the value of a computer after it was bought.

- After what approximate period of time does the computer have no value?
- When was the computer worth approximately \$200?
- Is it appropriate to join the points with a straight line? Explain.

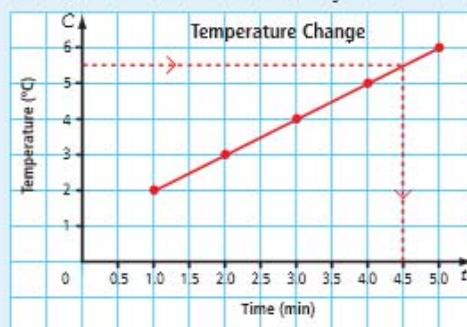

Key Ideas

- On a graph, you can use a line to interpolate values between known values.
 - Start with a known value for x .

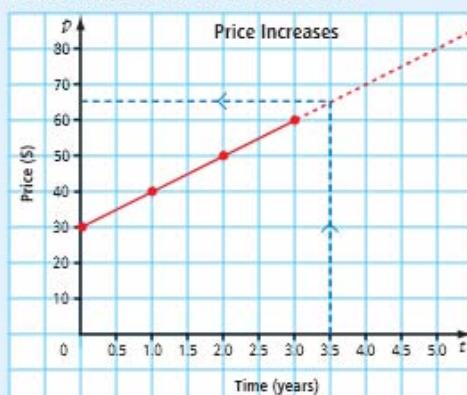

- Start with a known value for y .

- On a graph, you can extend a line to extrapolate values beyond known values.

- Use a dashed line to extend the line beyond the known x -value or y -value.
- Start with a known value for x .

- Start with a known value for y .

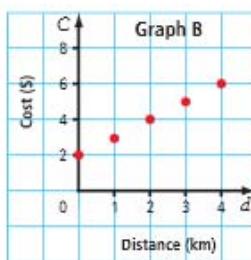

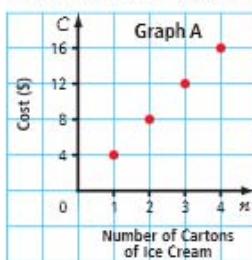

- Interpolation and extrapolation should be used only when it is reasonable to have values between or beyond the values on a graph.

Check Your Understanding

Communicate the Ideas

- Josh asked you to help him understand interpolation and extrapolation. Use an example and a graph to help explain how interpolation and extrapolation are similar and how they are different.
- Grace says it would be reasonable to interpolate values on these graphs. Is she correct? Explain.

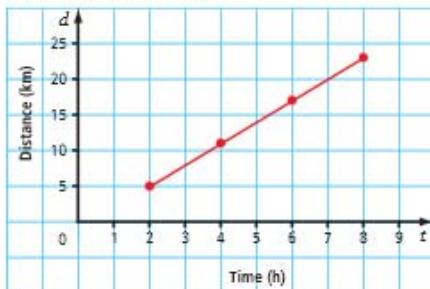

- Develop a situation that involves a linear relation. Draw and label the corresponding graph. Develop a question and answer that requires extrapolating a value on the graph. Compare your work with that of a classmate.

Practise

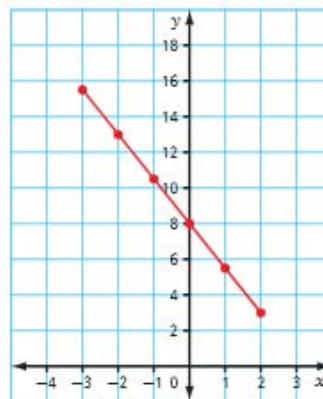

For help with #4 to #7, refer to Example 1 on page 222.

- The graph shows a linear relation between distance and time.

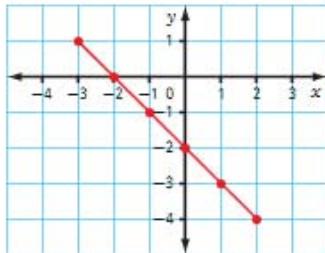

- What is the approximate value of the d -coordinate when $t = 5$? Explain the method you used to determine the answer.
- What is the approximate value of the t -coordinate when $d = 20$?

- The graph shows a linear relation.

- What is the approximate value of the y -coordinate when $x = -2.5$?
- What is the approximate value of the x -coordinate when $y = 4$?

6. The graph shows a linear relation.

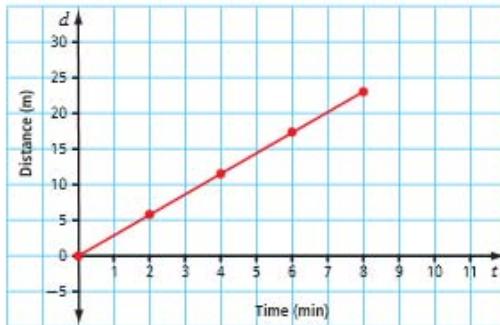

a) What is the approximate value of the y -coordinate when $x = 1.5$?
 b) What is the approximate value of the x -coordinate when $y = 0.5$?
 7. a) The table of values represents the distance that Sophie cycles in relation to time.

Time, t (h)	1	2	3	4	5	6
Distance, d (km)	12.5	25	37.5	50	62.5	75

a) Plot the linear relation on a graph.
 b) From the graph, determine the approximate distance Sophie has cycled after 2.5 h.
 c) From the graph, approximate how long it takes Sophie to cycle 44 km.

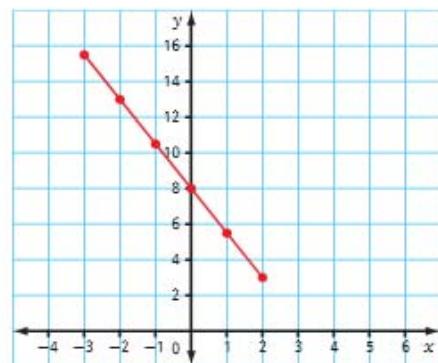

For help with #8 to #11, refer to Example 2 on pages 223–224.

8. The graph shows a linear relation between distance and time.

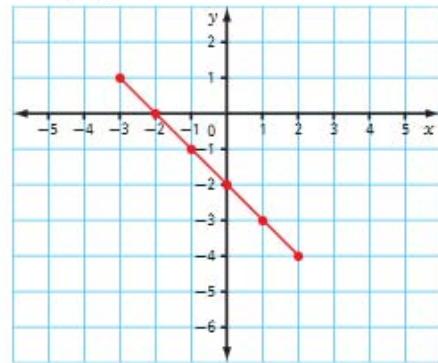

a) What is the approximate value of the d -coordinate when $t = 10$?
 b) What is the approximate value of the t -coordinate when $d = 33$?

9. The graph shows a linear relation.

a) What is the y -coordinate when $x = -3$?
 b) What is the x -coordinate when $y = 1$?

10. The graph shows a linear relation.

a) What is the approximate value of the y -coordinate when $x = -4$?
 b) What is the approximate value of the x -coordinate when $y = -6$?

11. The table of values represents the drop in temperature after noon on a winter day.

Time, t (h)	1:00	2:00	3:00	4:00	5:00	6:00
Temperature, d ($^{\circ}$ C)	1	0	-1	-2	-3	-4

a) Plot the data on a graph.
 b) From the graph, what is the approximate temperature at 6:30?
 c) From the graph, determine the approximate time when the temperature is 2° C.

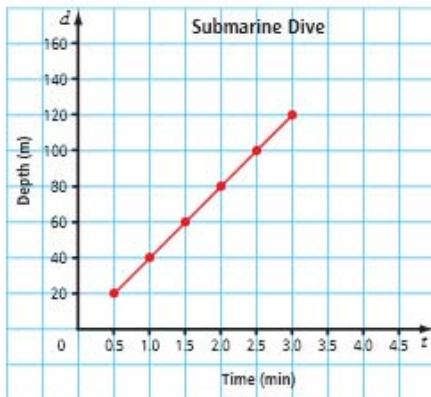

Apply

12. a) In a bulk food store, trail mix costs \$2.40 per 250 g. Plot the data on a graph.

Mass of Trail Mix, m (g)	250	500	750	1000	1250
Cost, C (\$)	2.40	4.80	7.20	9.60	12.00

b) From the graph, approximate how much 2000 g of trail mix would cost.
 c) From the graph, approximate how much trail mix you would get for \$13.

13. The submarine HMCS *Victoria* can dive to a depth of 200 m.

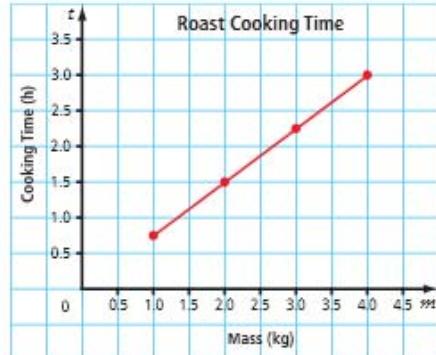

a) Is it reasonable to interpolate or extrapolate values on this graph? Explain.
 b) How long does it take *Victoria* to reach a depth of 140 m?
 c) What is the submarine's depth after 4 min?

14. A grade 9 class earns a profit of 53¢ for each program they sell for the school play.

a) Is it reasonable to interpolate or extrapolate values on this graph? Explain.
 b) If 500 programs were sold, how much profit would the students make? What strategy did you use to solve the problem?
 c) Approximately how many programs would students need to sell in order to earn \$2500?

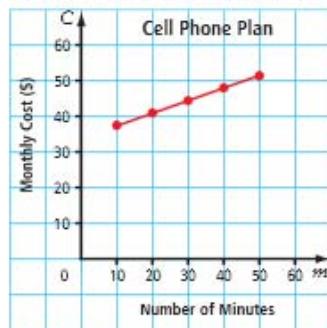

15. Sean learned in his cooking class that the time it takes to cook a roast depends upon its mass. The graph shows the relationship between cooking time and the mass of a roast.

From the graph, determine the approximate cooking time for a roast with each given mass.

a) 1.25 kg b) 2.25 kg c) 4.2 kg

16. A cell phone company charges a \$33.95 monthly fee and long-distance charges at a rate of \$0.35 per minute. The graph shows the monthly cost of phone calls based on the number of long-distance minutes.

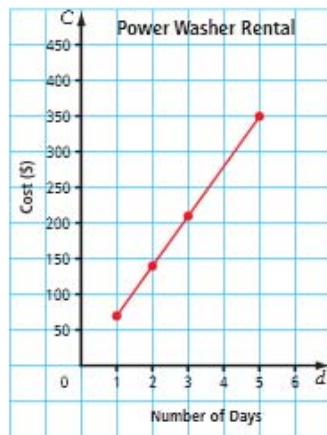

a) Is it reasonable to interpolate or extrapolate values on this graph? Explain.

b) What would be the approximate monthly bill for 60 min of long-distance calls?

c) Approximately how many minutes of long-distance calls could you buy for \$50?

17. The graph represents the relationship between the cost of renting a power washer and rental time.

a) How much does it cost to rent a power washer for four days? What is the cost per day? How do you know?

b) How long could you rent the power washer if you had \$420?

Extend

18. The table shows the relationship between stopping distance and speed of a vehicle.

Speed, s (km/h)	15	30	45	60	75
Stopping Distance, d (m)	6	15	28	42	65

a) Plot the data on a graph. Draw a line to join the data points to best approximate the trend.

b) What happens to stopping distance as speed increases?

c) Estimate the stopping distances for speeds of 5 km/h, 55 km/h, and 80 km/h.

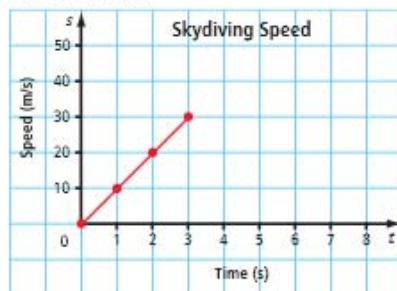

d) Estimate the speed before a driver applied the brake for stopping distances of 10 m, 50 m, and 100 m.

e) About how much farther is the stopping distance at 50 km/h than it is at 30 km/h? At 70 km/h than at 50 km/h?

f) Why do you think the graph is not a straight line?

19. The speed of a falling skydiver is shown for the first 3 s.

- Approximately how long would it take for the skydiver to reach terminal velocity?
- Approximately how far would the skydiver fall in that time?
- Why do you think the graph is approximately a straight line?

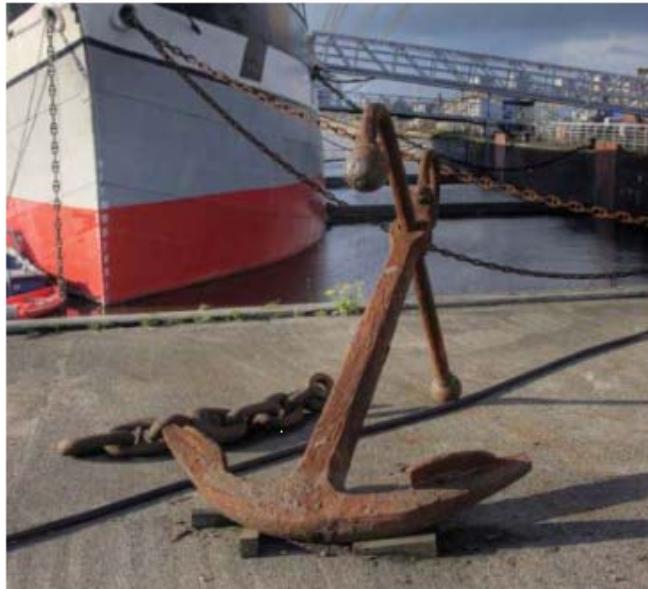

Did You Know?

Terminal velocity is the maximum speed that a skydiver can reach when falling. Air resistance prevents most skydivers in free fall from falling any faster than 54 m/s.

Math Link

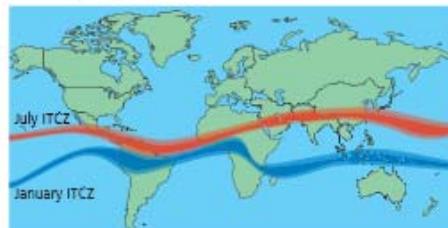

The area of the ocean called the Intertropical Convergence Zone (ITCZ) has little or no wind. Before propellers and motors, sailors used a relatively light anchor called a kedge to help them move across this region. The kedge anchor, which was attached to a line, was rowed out approximately 650 m ahead of the ship and dropped to the sea floor. A crew on the ship then grabbed the line and hauled it in to pull the ship to the anchor, a distance of 650 m. This process, called kedging, was repeated until the boat passed through the ITCZ.

- Create a table of values showing the relationship between the number of kedges and the total distance travelled.
- Plot the data on a graph. Label the graph.
- Determine the value for how many kedges it would take to traverse the width of the ITCZ.
- How did the skills you have learned in this chapter help you solve part c)?

Did You Know?

The ITCZ is located between 5° north and 5° south of the equator and is approximately 1100 km wide. Note how the position of the ITCZ moves during the year.

WWW Web Link

To learn more about the Intertropical Convergence Zone (ITCZ), go to www.mathlinks9.ca and follow the links.

6.2 Interpreting Graphs

Prescribed Learning Outcomes (PLO'S):

- Extend a given graph (extrapolate) to determine the value of an unknown element
- Interpolate the approximate value of one variable on a given graph given the value of the other variable
- Extrapolate the approximate value of one variable from a given graph given the value of the other variable
- Solve a given problem by graphing a linear relation and analyzing the graph

Terminology

y Dependent Variable: graphed on the vertical axis; e.g. cost

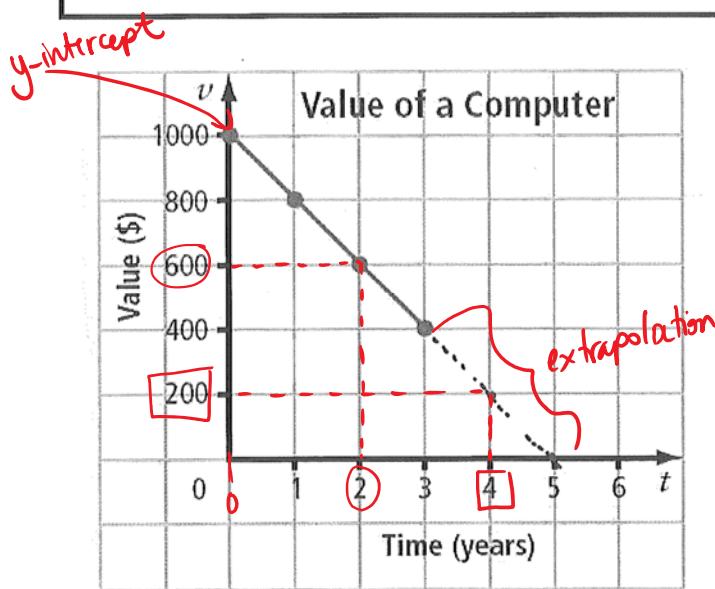

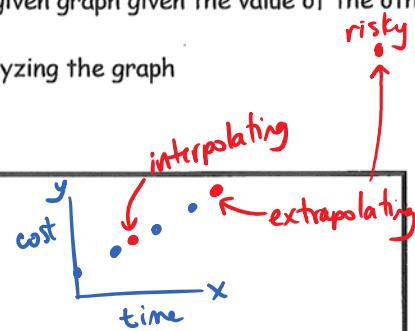

x Independent Variable: graphed on the horizontal axis; e.g. time

Interpolate: estimate a value between two given values

Extrapolate: estimate a value beyond a given set of values

Slope: describes the steepness of a line $m = \frac{\text{rise}}{\text{run}} = \frac{y_2 - y_1}{x_2 - x_1}$

y-intercept: Where the graph crosses the y-axis. The x-coordinate is zero

- How much did the computer cost?
\$1000
(time = 0, when we bought comp)
- When was it worth \$600?
after 2 years
- After what approximate period of time does the computer have no value?
~5 years
- When is the computer worth approximately \$200?
4 years
(extrapolating)

INTERPOLATION AND EXTRAPOLATION between and beyond

Interpolation means to estimate a value **BETWEEN** two given values.

Extrapolation means to estimate a value **BEYOND** a given set of values.

Always check to see if it makes sense to do either one of these. For example: 5.35 dollars makes sense, 5.35 people ???

no

yes

Example 2: The graph below represents Sally's daily Profit at her pie shop. The horizontal axis represents the number of pies sold and the vertical axis represents the Profit in dollars.

a) How many pies must Sally sell in one day to break even?

6 pies

b) If Sally has made a profit of \$15, how many pies has she sold?

9 pies

c) How much profit does Sally make on each pie?

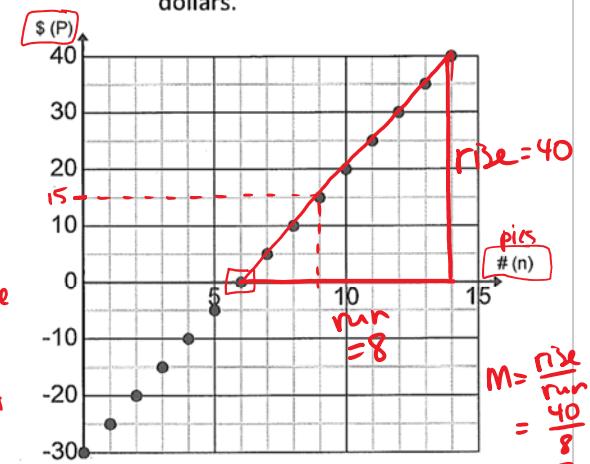

$\text{slope} \rightarrow \$5 - \text{goes up by } \$5 \text{ for each pie}$

d) What does the y-intercept of -30 mean?

$\text{the cost of the supplies } (\$30)$

\uparrow
y-intercept

e) Write a linear equation to represent the graph.

e) If Sally sells 50 pies in one day, what will the profit be?

$$\begin{array}{l} n = 50 \\ P = ? \\ P = 5(50) - 30 = 220 \end{array}$$

f) Could the points be connected in this graph? What assumptions are you making?

no, not if she only sells whole pies
or
yes, if she will sell portions of a pie.

$$\begin{array}{l} y = mx + b \\ \uparrow \quad \uparrow \\ \text{slope} \quad \text{y-intercept} \end{array}$$

$$P = 5n - 30$$

OR

$$\begin{array}{|c|c|c|} \hline n & P & \\ \hline 0 & -30 & \\ \hline 5 & -25 & \\ \hline 10 & -20 & \\ \hline \vdots & \vdots & \\ \hline \end{array}$$

\downarrow
 $dn + \sim = P$
 $5n - 30 = P$

ASSIGNMENT: P.226 #2, 4, 5, 6, 9, 10, 13, 15, 16ac

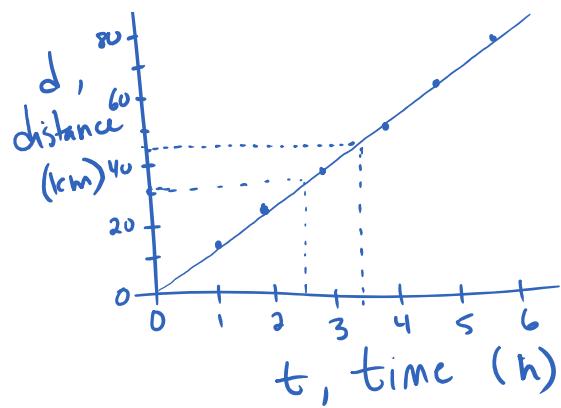

7

$$\begin{array}{l} d, \frac{80}{60} \\ \uparrow \quad \uparrow \end{array}$$

$$b) \sim 32 \text{ km}$$

(1)

b) $\sim 32 \text{ km}$

c) $\sim 3.4 \text{ hrs}$

*Text 6.3 Graphing Linear Relations

Friday, June 25, 2010 10:21 AM

6.3

Graphing Linear Relations

Focus on...

After this lesson, you will be able to...

- graph linear relations
- match equations of linear relations with graphs
- solve problems by graphing a linear relation and analysing the graph

Tina is in charge of ordering water supplies for a cruise ship. She knows the amount of water required per day for each passenger and crew member as well as the amount of water reserves that the ship carries. She decides to use her knowledge of linear relations to draw a graph representing the relationship between the amount of water needed and the length of a cruise.

If Tina were to develop an equation, how could she determine if the graph and the equation represent the same relationship?

Materials

- grid paper
- ruler

What values will you plot along the horizontal axis? along the vertical axis?

Explore Graphs of Linear Relations

On a cruise, the average person requires a minimum of 4 L of water per day. The cruise ship has capacity for 1500 passengers and crew. The ship also carries a reserve of 50 000 L of water in case of emergency.

- Use a method of your choice to determine how much water will be needed each day of a seven-day cruise.
 - On grid paper, plot the data and label your graph. Compare your graph with that of a classmate.
- Predict how much water is needed for a ten-day cruise.
 - What linear equation represents the litres of water needed per day?
 - How could you verify your answer for part a)? Try out your strategy.

Reflect and Check

- Do your graph and the equation represent the same relationship? Explain.
- Discuss with a partner if it would be appropriate to interpolate or extrapolate values using a fraction of a day. Explain why or why not.
- If the cruise ship used 152 000 L of water, approximately how long did the trip last? Compare the method you used with a classmate's.
 - Is there more than one way to answer part a)? Explain. Which method seems more efficient?

Link the Ideas

Example 1: Graph a Linear Equation

The world's largest cruise ship, *Freedom of the Seas*, uses fuel at a rate of 12 800 kg/h. The fuel consumption, f , in kilograms, can be modelled using the equation $f = 12800t$, where t is the number of hours travelled.

- Create a graph to represent the linear relation for the first 7 h.
- Approximately how much fuel is used in 11 h? Verify your solution.
- How long can the ship travel if it has approximately 122 000 kg of fuel? Verify your solution.

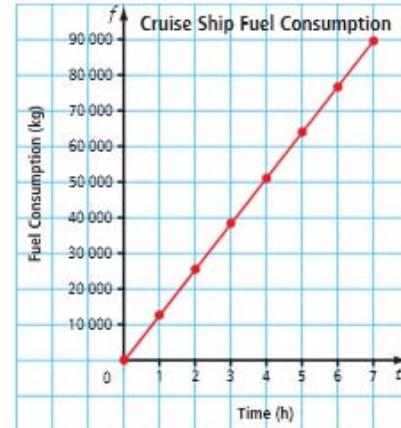

Solution

Method 1: Use Paper and Pencil

- Create a table of values.
Graph the coordinate pairs.

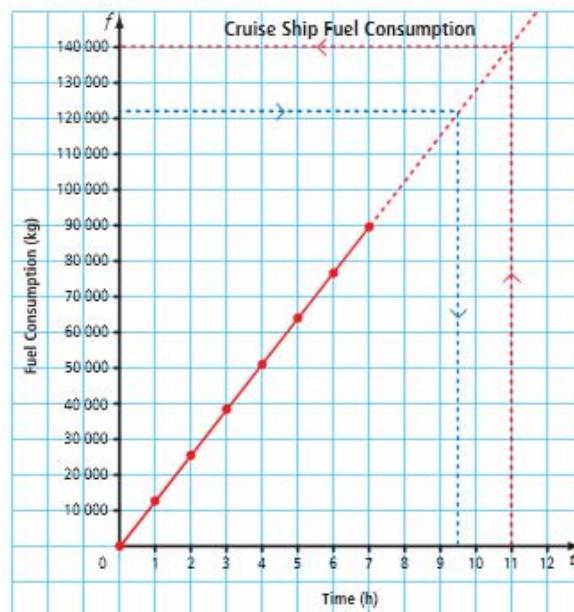

Time, t (h)	Fuel Consumption, f (kg)
0	0
1	12 800
2	25 600
3	38 400
4	51 200
5	64 000
6	76 800
7	89 600

Describe the connection between the equation and the graph.

- Draw a straight line to connect the data points.
Extend the line past the last data point.

Approximately 140 000 kg of fuel are used in 11 h.

What different methods might you use to represent and then solve the problem?

Check:

Substitute the value $t = 11$ into the equation $f = 12800t$.

$$f = 12800(11)$$

$$= 140800$$

The approximate solution is correct.

c) The fuel will last approximately 9.5 h.

Check:

Substitute $f = 122000$ into the equation and solve for t .

$$122000 = 12800t$$

$$\frac{122000}{12800} = t$$

$$t \approx 9.53$$

The approximate solution is correct.

Method 2: Use a Spreadsheet

a) In the spreadsheet, cell A1 has been labelled Time, t . Cell B1 has been labelled Fuel Consumption, f .

Enter the first eight values for t in cells A2 to A9. Then, enter the formula for the equation into cell B2. Use an = sign in the formula and * for multiplication. The value for t comes from cell A2.

Use the cursor to select cells B2 down to B9.

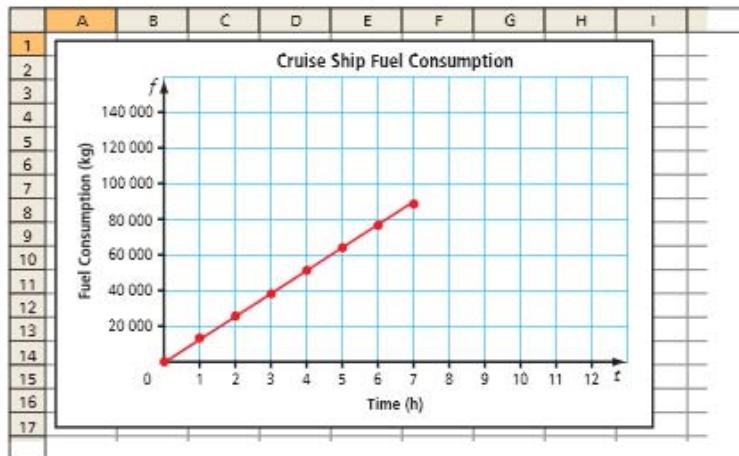

Then, use the Fill Down command to enter the formula in these cells. The appropriate cell for t will automatically be inserted. For example, $=12800*A6$ will be inserted into cell B6.

Use the spreadsheet's graphing command to graph the table of values. Note that different spreadsheets have different graphing commands. Use your spreadsheet's instructions to find the correct command.

	A	B
1	Time, t (h)	Fuel Consumption, f (kg)
2	0	=12800*A2
3	1	12800
4	2	25600
5	3	38400
6	4	51200
7	5	64000
8	6	76800
9	7	89600

Tech Link

You could use a graphing calculator to graph this linear relation. To learn about how to do this go to www.mathlinks9.ca and follow the links.

b) and c) From the menu, select Add Trendline to draw a straight line from the first data point to the last one. Extend the line past the last data point.

For part b), approximately 140 000 kg of fuel are used in 11 h. For part c), the fuel will last approximately 9.5 h.

Did You Know?

Fish finders operate using sonar, which uses sound waves to "see" objects underwater. The fish finder produces a sound wave and sends it through the water. When the sound wave meets an object within its range, it bounces back to the fish finder. The fish finder determines the depth of the object by measuring the time between when the sound wave was sent and when it returns. The fish finder then sketches the object on the screen.

Show You Know

a) Graph the linear relation $y = 2x - 5$.

b) Use the graph to estimate the value of y if $x = 8$.

c) Use the graph to estimate the value of x if $y = -4$.

Example 2: Determine a Linear Equation From a Graph

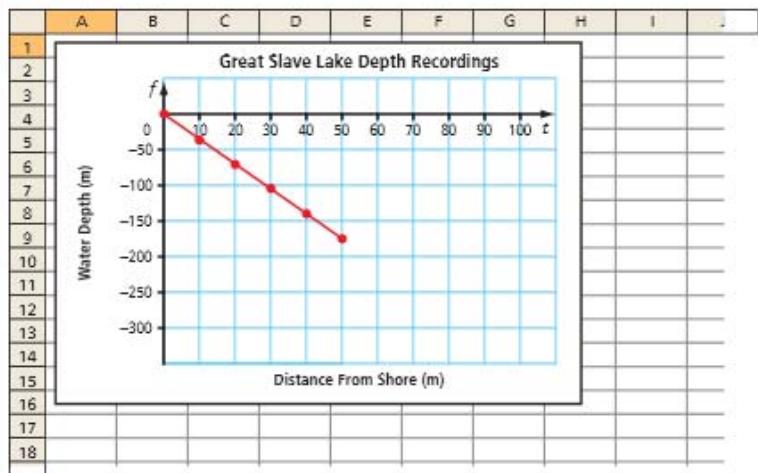

Great Slave Lake, which is located in the Northwest Territories, is the deepest lake in North America. It has a maximum depth of 614 m. Sam decided to check the depth using his fish finder. He collected the following data up to a depth of 180 m, which was the maximum depth that his fish finder could read.

Distance From Shore, d (m)	Water Depth, w (m)
0	0
10	-35
20	-70
30	-105
40	-140
50	-175

Literacy Link

A depth, such as 35 m, is expressed in different ways. In a table and a graph, use the negative value, -35 . In a sentence, say "35 m below surface."

Sam used a spreadsheet to graph the data.

- What linear equation does this graph represent? How do you know the equation matches the graph?
- If this pattern continues, how far from shore would Sam be when the water is 614 m deep?
- At what rate is the depth of the water decreasing?
- Is it appropriate to interpolate or extrapolate values on this graph? Explain.

Solution

- Add a column to the table to help determine the pattern.

Distance From Shore, d (m)	Water Depth, w (m)	Pattern: Multiply d by -3.5
0	0	0
10	-35	-35
20	-70	-70
30	-105	-105
40	-140	-140
50	-175	-175

The water depth, w , decreases by 3.5 m for each 1-m increase in the distance from shore, d . The equation is $w = -3.5d$.

Check by substituting a known coordinate pair, such as (30, 105), into the equation.

$$\begin{aligned} \text{Left Side} &= -105 & \text{Right Side} &= -3.5(30) \\ & & &= -105 \end{aligned}$$

Left Side = Right Side
The equation is correct.

What is the connection between the graph and the equation?

Strategies**Solve an Equation**

b) Substitute $w = 614$ into the equation and solve for d .

$$-614 = -3.5d$$

$$\frac{-614}{-3.5} = d$$

$$d \approx 175.4$$

How else could you solve this problem?

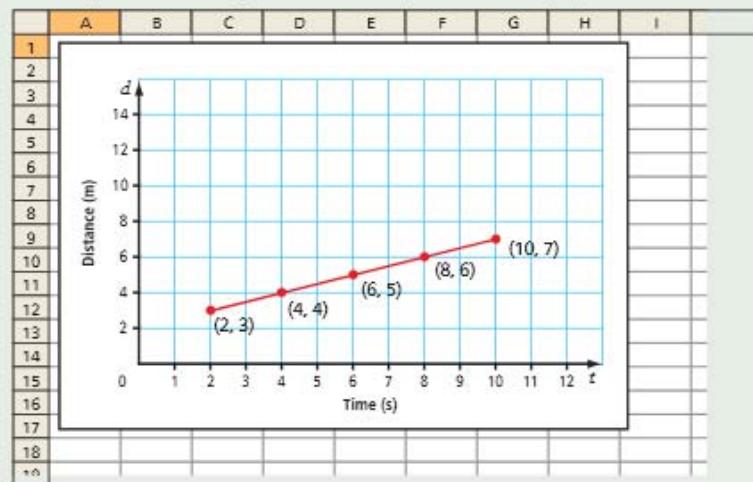

Sam would be approximately 175.4 m from shore when the water is 614 m deep.

c) The depth is decreasing at a rate of 3.5 m for each metre away from shore. The rate at which the water depth is decreasing is the coefficient of d in the equation.

d) Yes, it is reasonable to interpolate or extrapolate values between and beyond the given data points since the values for distance and depth exist. However, it is unreasonable to extrapolate values beyond the maximum depth of 614 m.

Show You Know

Identify the linear equation that represents the graph.

Example 3: Graph Horizontal and Vertical lines

For each table of values, answer the following questions:

Table 1

Time, t (s)	Distance, d (m)
0	6
30	6
60	6
90	6
120	6

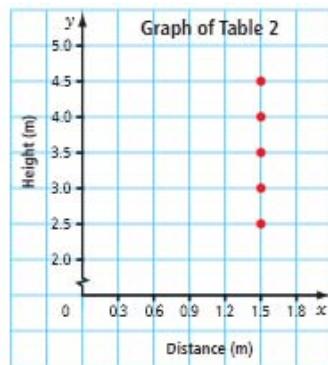

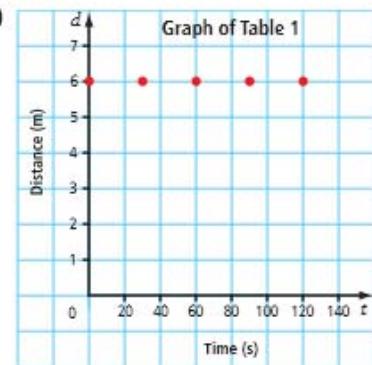

Table 2

Distance, x (m)	Height, y (m)
1.5	2.5
1.5	3.0
1.5	3.5
1.5	4.0
1.5	4.5

- Draw a graph to represent the table of values.
- Describe a situation that the graph might represent.
- Write the equation. Explain how you know the graph represents the equation.

Solution

a)

b) Table 1: The graph could show the relationship between distance and time when a pedestrian is waiting for a traffic light to change. The distance from the pedestrian to the opposite side of the road is constant.

Table 2: The graph could show the relationship between the height of a ladder and its distance from the wall where it is placed. The distance of the base of the ladder from the wall is constant as the ladder is extended.

c) Table 1: The distance, d , remains constant for each interval of time. The equation is $d = 6$.
For each value of t in the table and the graph, the value of d is 6.

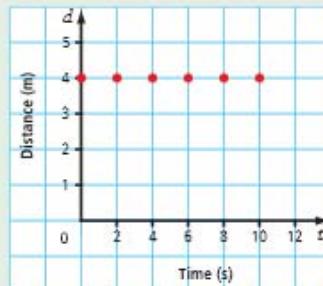

Table 2: The distance, x , remains constant for each interval of height. The equation is $x = 1.5$.
For each value of y in the table and the graph, the value of x is 1.5.

Think of a different situation to represent each graph.

Show You Know

- Write the linear equation that represents the graph.
- Explain how you know the graph matches the equation.

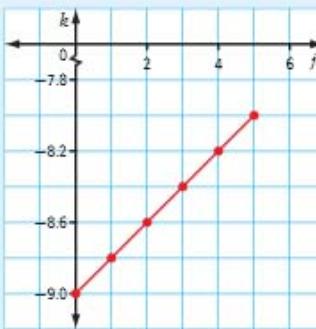

Key Ideas

- You can graph a linear relation represented by an equation.
 - Use the equation to make a table of values.
 - Graph using the coordinate pairs in the table. The graph of a linear relation forms a straight line.

$$k = \frac{j}{5} - 9$$

<i>j</i>	<i>k</i>
0	-9.0
1	-8.8
2	-8.6
3	-8.4
4	-8.2
5	-8.0

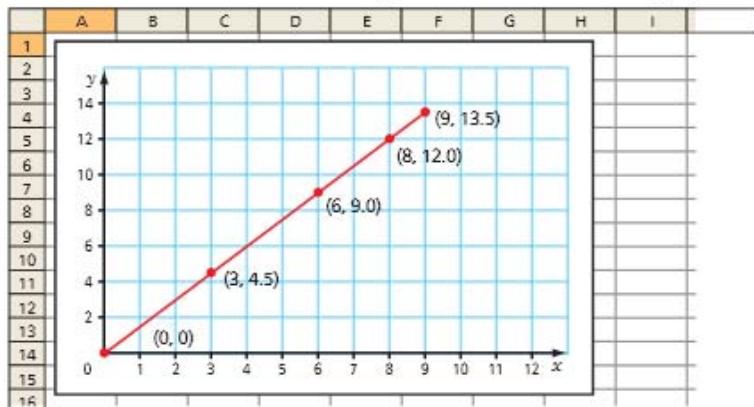

- The graph of a linear relation can form a horizontal or a vertical line.
- You can use graphs to solve problems by interpolating or extrapolating values.

Check Your Understanding

Communicate the Ideas

- You are given a linear equation. Describe the process you would follow to represent the equation on a graph. Use an example to support your answer.
- Use examples and diagrams to help explain how horizontal and vertical lines and their equations are similar and how they are different.

3. a) Describe a real-life situation to represent the data on this graph.

b) Explain how you would determine the equation that represents the graph. Give your explanation to a classmate.
 c) Can you interpolate or extrapolate values on this graph? Explain your thinking.

Practise

For help with #4 to #7, refer to Example 1 on pages 232–234.

4. Ian works part-time at a movie theatre. He earns \$8.25/h. The relationship between his pay, p , and the time he works, t , can be modelled with the equation $p = 8.25t$.

- Show the relationship on a graph.
- Explain how you know the graph represents the equation.
- Ian works 8 h in one week. Use two methods to determine his pay.

5. Andrea is travelling by bus at an average speed of 85 km/h. The equation relating distance, d , and time, t , is $d = 85t$.

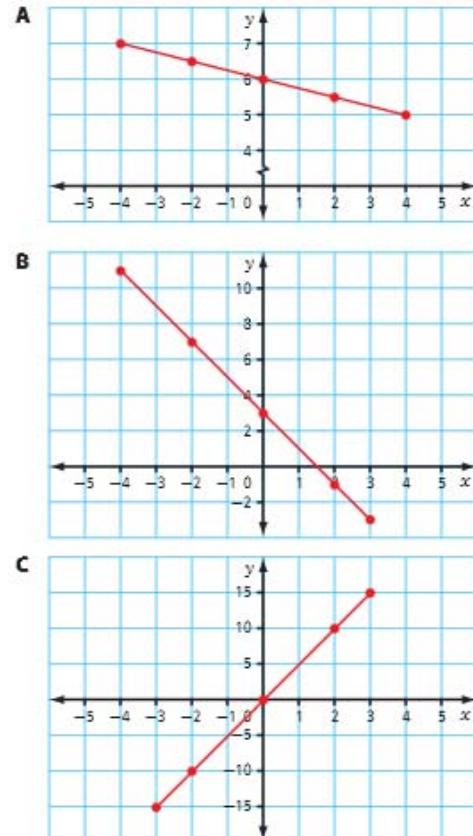

- Show the relationship on a graph.
- How long does it take Andrea to travel 300 km?

6. Choose the letter representing the graph that matches each linear equation.

- $y = 5x$
- $y = -2x + 3$
- $y = -\frac{x}{4} + 6$

WWW Web Link

For practice matching graphs and linear equations, go to www.mathlinks9.ca and follow the links.

7. Create a table of values and a graph for each linear equation.

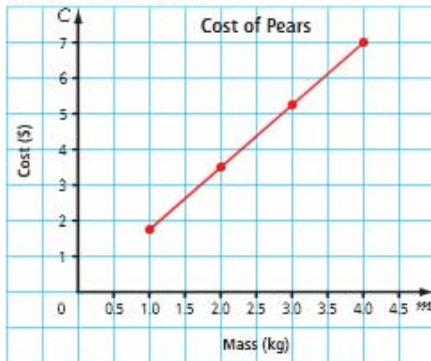

a) $x = 4$

c) $m = \frac{k}{5} + 13$

b) $r = -3s + 4.5$

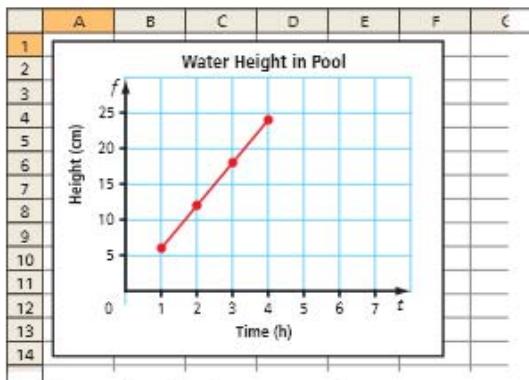

For help with #8 to #11, refer to Example 2 on pages 234–236.

8. The graph shows the relationship between the cost, C , in dollars and the mass, m , in kilograms of pears.

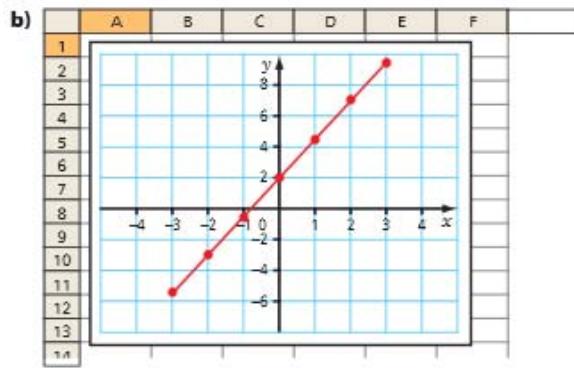

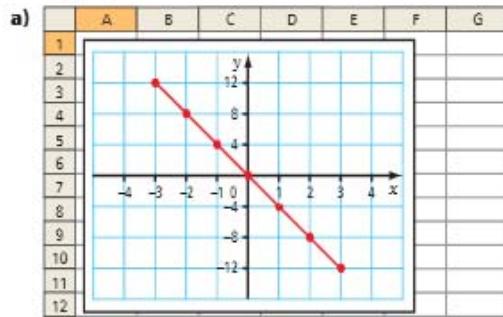

a) What is the linear equation?
 b) How much could you buy for \$5?
 c) Is it appropriate to interpolate or extrapolate values on this graph? Explain.

9. The graph represents the relationship between the height of water in a child's pool, h , and the time, t , in hours as the pool fills.

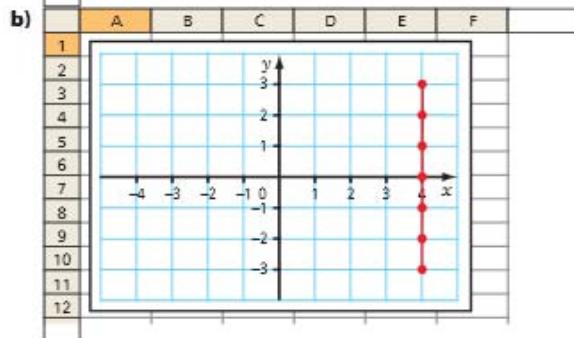

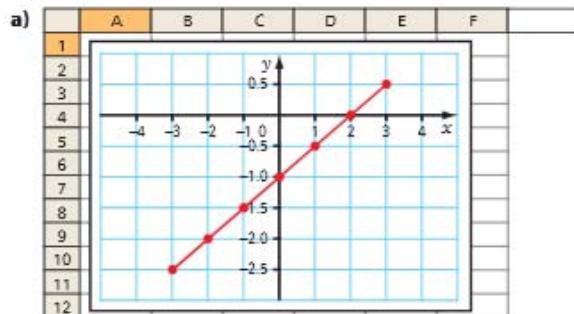

a) Determine the linear equation.
 b) What is the height of the water after 5 h?
 c) Is it appropriate to interpolate or extrapolate values on this graph? Explain.

10. Determine the linear equation that models each graph.

11. What linear equation does each graph represent?

12. Create a graph and a linear equation to represent each table of values.

a)	x	y
-3	-10	
-2	-7	
-1	-4	
0	-1	
1	2	
2	5	
3	8	

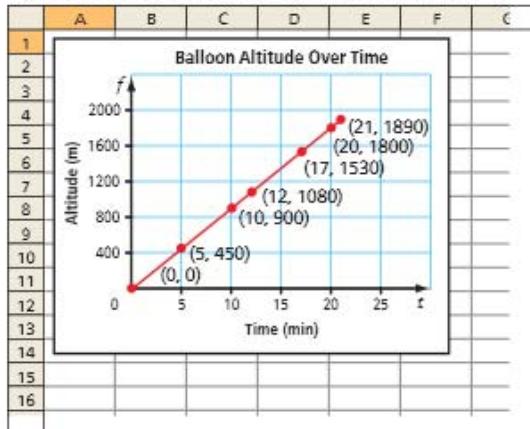

c)	f	z
-3	-3	
-2	-3	
-1	-3	
0	-3	
1	-3	
2	-3	
3	-3	

b)	r	t
-3	-2.5	
-2	-1.0	
-1	0.5	
0	2.0	
1	3.5	
2	5.0	
3	6.5	

d)	h	n
-3	-0.75	
-2	-0.5	
-1	-0.25	
0	0	
1	0.25	
2	0.5	
3	0.75	

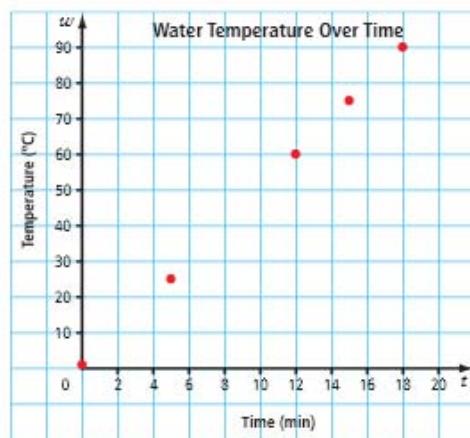

Apply

13. The graph represents the altitude of a hot-air balloon the first 20 min after it was released.

- What was the approximate altitude of the balloon after 15 min?
- Estimate how long it took for the balloon to rise to an altitude of 1 km.
- What linear equation models the graph?
- How fast is the balloon rising?

14. Sanjay conducted an experiment to determine how long it takes to heat water from 1 °C to its boiling point at 100 °C. He plotted his data on a graph.

- Approximately how long did it take for the water to reach boiling point? Explain your reasoning.
- What was the temperature of the water after 10 min?
- At what rate did the water temperature increase? Explain your reasoning.

15. Paul drives from Edmonton to Calgary. He uses a table to record the data.

Time, t (h)	Distance, d (km)
0.5	55.0
0.9	99.0
1.2	132.0
1.5	165.0
2.3	253.0
2.7	297.0

- Graph the linear relation.
- How far did Paul drive in the first 2 h?
- How long did it take Paul to drive 200 km?
- Write the equation that relates time and distance.
- What was Paul's average driving speed? What assumptions did you make?

WWW Web Link

To learn about using a graphing calculator to enter data on a table and plot the data on a graph, go to www.mathlinks9.ca and follow the links.

16. The relationship between degrees Celsius ($^{\circ}\text{C}$) and degrees Fahrenheit ($^{\circ}\text{F}$) is modelled by the equation $F = \frac{9}{5}C + 32$.

- Graph the relationship for values between -50°C and 120°C .
- Water boils at 100°C . What is this temperature in degrees Fahrenheit?
- Water freezes at 0°C . How did you represent this on your graph?
- At what temperature are the values for $^{\circ}\text{C}$ and $^{\circ}\text{F}$ the same?

17. Scuba divers experience an increase in pressure as they descend. The relationship between pressure and depth can be modelled with the equation $P = 10.13d + 102.4$, where P is the pressure, in kilopascals, and d is the depth below the water surface, in metres.

- Graph the relationship for the first 50 m of diving depth.
- What is the approximate pressure at a depth of 15 m? Verify your answer.
- The maximum pressure a scuba diver should experience is about 500 kPa. At what depth does this occur? Verify your answer.
- What does “+ 102.4” represent in the equation? How is it represented on the graph?

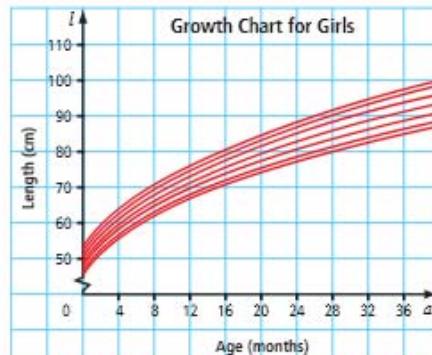

Did You Know?

After deep or long dives, scuba divers need to undergo decompression. They do this by ascending to the surface slowly in order to avoid decompression sickness, also known as the bends.

Extend

18. The graph shows the normal range of length for girls from birth to age 36 months.

- For what age range does girls' growth appear to represent a linear relation?
- For what age range, does girls' growth appear to represent a non-linear relation?

19. Janice left the school at 12 noon riding her bike at 20 km/h. Flora left school at 12:30 riding her bike at 24 km/h.

- Draw a distance-time graph to plot the data for both cyclists during the first four hours. Use a different colour for each cyclist.
- How can you tell from the graph that Flora has caught up to Janice?
- About what time did Flora catch up to Janice?
- If Janice and Flora continued to ride at their respective speeds, at what time would they again be apart by a distance of 2 km?

20. An online music download site offers two monthly plans. Plan A offers \$10 plus \$1 per download and Plan B offers \$1.50 per download.

- Graph both linear relations on the same grid.
- Explain the conditions under which each deal is better.

21. Simple interest is paid according to the formula $I = p \times r \times t$, where p is the principal, r is the rate of interest per year, and t is the time in years. The interest is not added to the principal until the end of the time period. Canada Savings Bonds offer a simple interest bond payable at 3.5% per year up to a maximum of ten years.

- a)** Create a table of values to show the interest earned on a \$1000 bond for the ten-year period.
- b)** Use a graph to show the interest earned over ten years.
- c)** How many years would it take to earn \$100 interest? \$200 interest?
- d)** If you could leave the principal beyond the ten-year period, estimate the number of years it would take to earn \$500 interest.

Math Link

The world's fastest submarines can reach speeds of 74 km/h in 60 s, starting from rest. If a submarine is already moving, then the time to reach its top speed will differ.

- a)** Choose four different starting speeds up to a maximum of 74 km/h. For each speed, assume that the acceleration is the same. For each speed include:
 - a table of values
 - a linear equation and a graph to represent the relationship between speed and time
- b)** Describe each graph. Identify any similarities and differences you observe between the graphs and the equations.

Did You Know?

A student team from the University of Québec set a new world speed record for the fastest one-person, non-propeller submarine. In 2007, the submarine, *OMER 6*, reached a speed of 4.642 knots (8.6 km/h) in the International Submarine Races.

6.3 Graphing Linear Relations

When Bill walks at the speed of 3km/h, the equation for distance he travels is:

$$y = mx + b$$

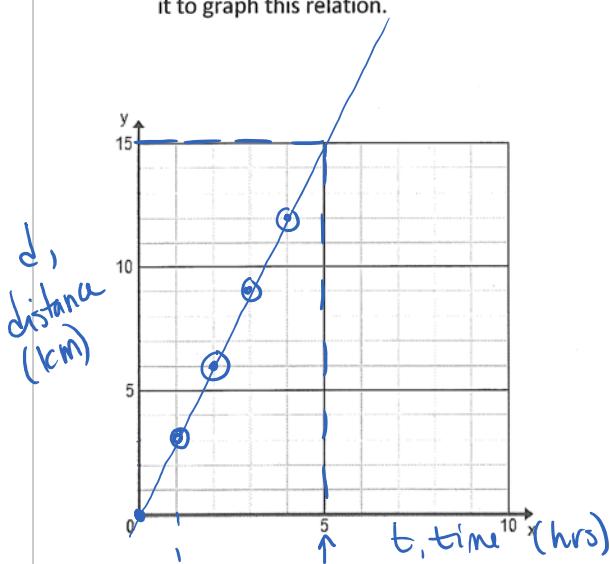

↓ slope
d = 3h
x

where d is the distance in kilometers and h is the hours spent walking

a) Create a table of values for the distance he walks in 1 hour, 2 hours, 3 and 4 hours. Use it to graph this relation.

x h	y d
1	3 ✓
2	6 ✓
3	9 ✓
4	12 ✓

(OR)

$$y = mx + b$$

↑
slope
= $\frac{\text{rise}}{\text{run}}$
= $\frac{3}{1}$
y-intercept
3
3

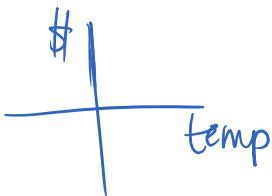

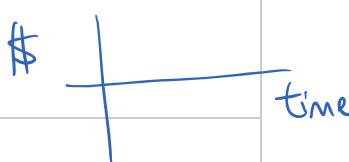

b) Extrapolate using the graph to determine the distance that Bill can walk in 5 hours.
Check your answer using the equation.

look beyond plotted points

in 5 hrs, Bill walks 15 km
check $d = 3(5\text{hrs}) = 15\text{ km}$

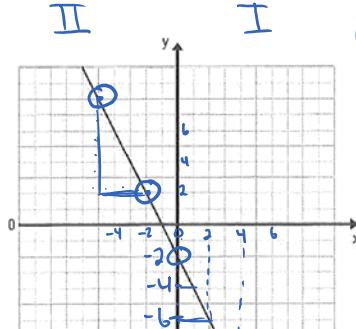

c) Why don't we have any negative values for x and y on this graph? Give an example of a graph where it would be appropriate to have negative values.

dist + time can't be negative

Writing an equation from a linear graph

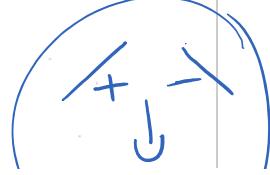

Write an equation for the relation shown in the graphs below: (hint: Make a table of values)

quadrants

$d \cdot x$	x	y
0	0	1
-2	-1	3
-4	-2	5
-6	-3	7
-8	-4	9

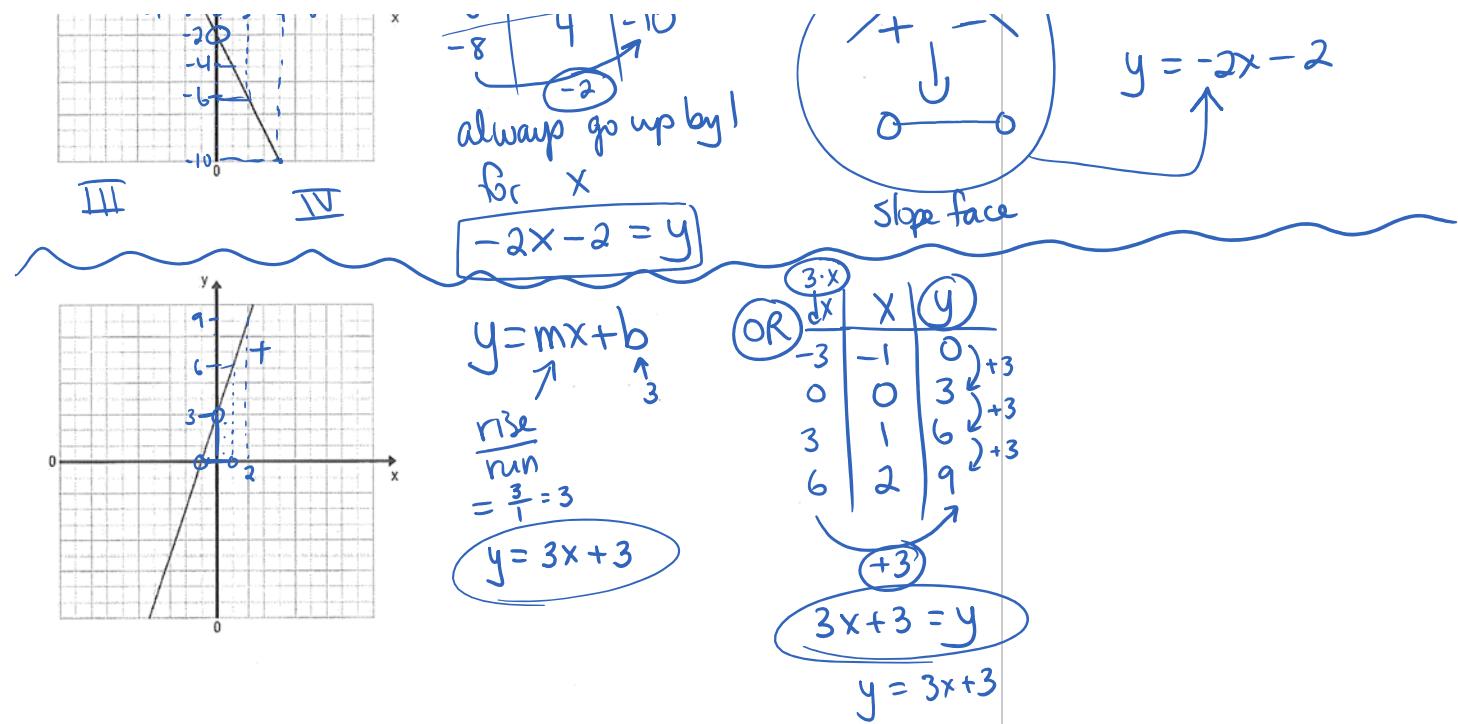

(OR)

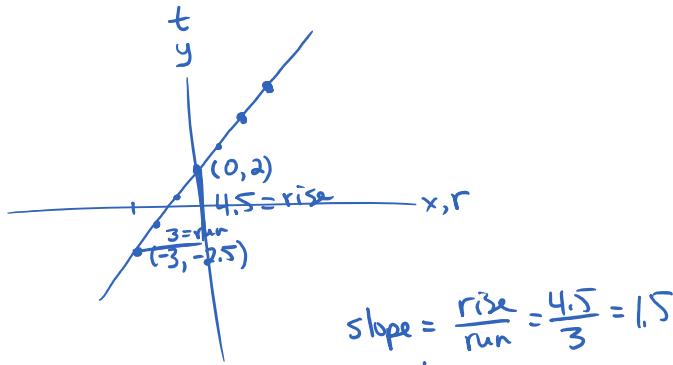

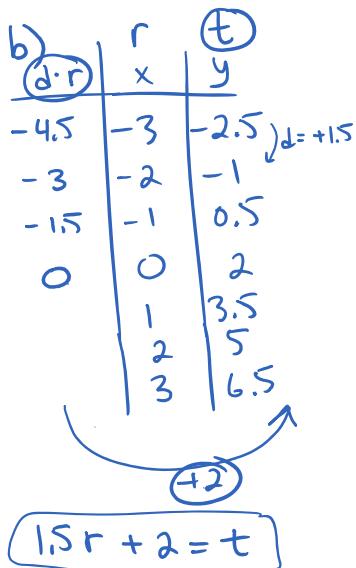

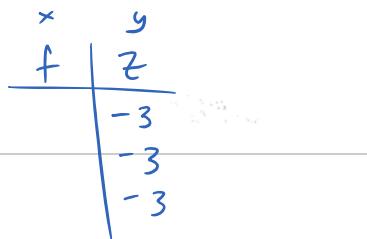

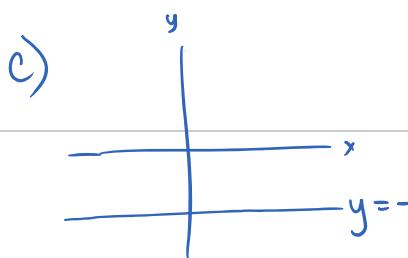

slope method

$$y = mx + b$$

↑
slope
= $\frac{\text{rise}}{\text{run}}$
= $\frac{6}{3} = -2$
 $y = -2x - 2$

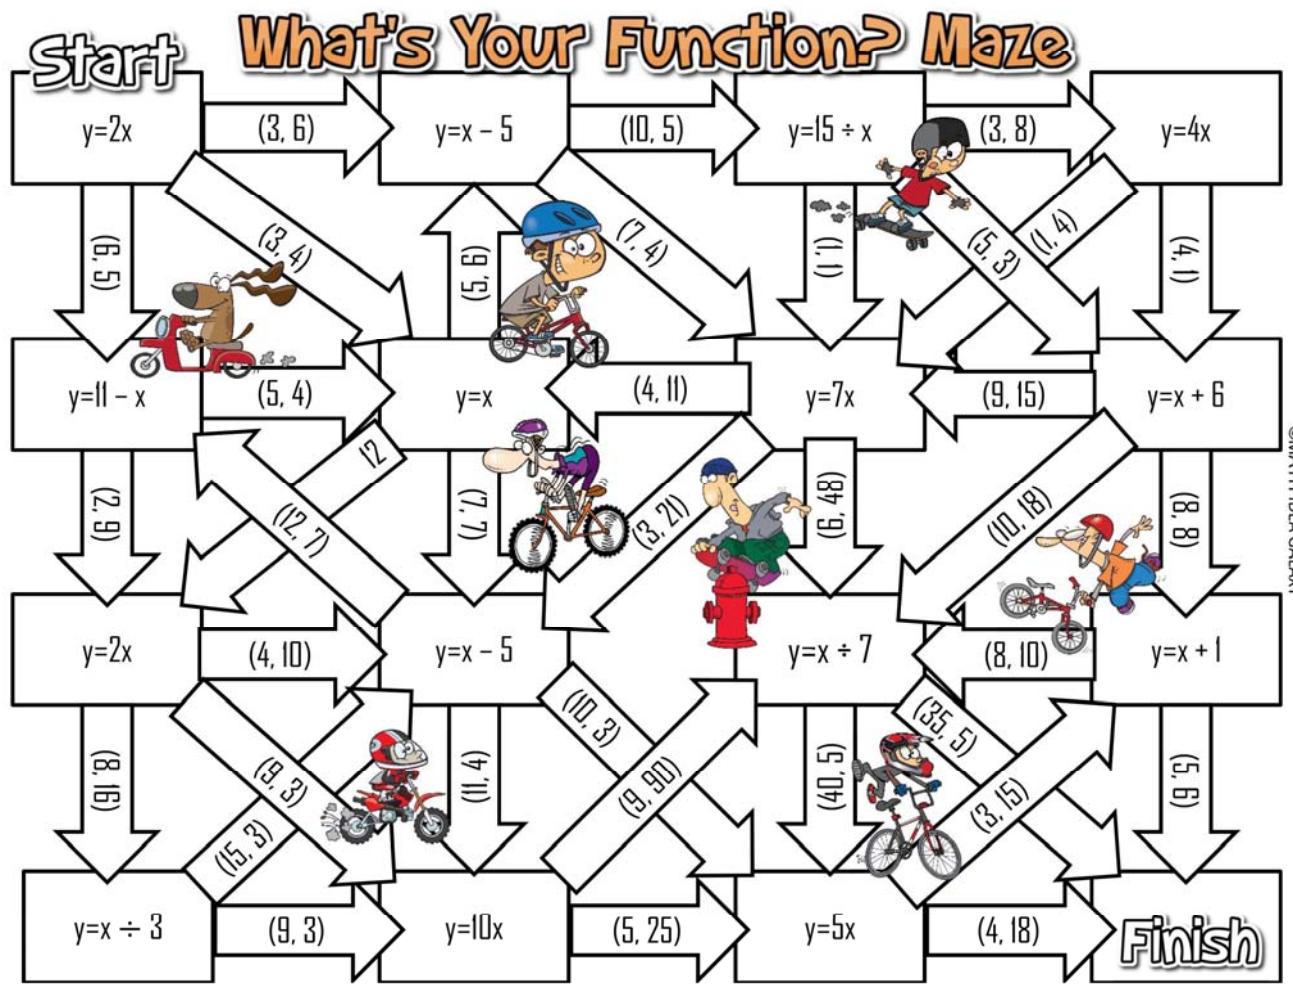

Assignment: p. 239 #5b, 6, 7a, 10a, 11ab, 12 ac

$y = mx + b$

$t = 1.5r + 2$

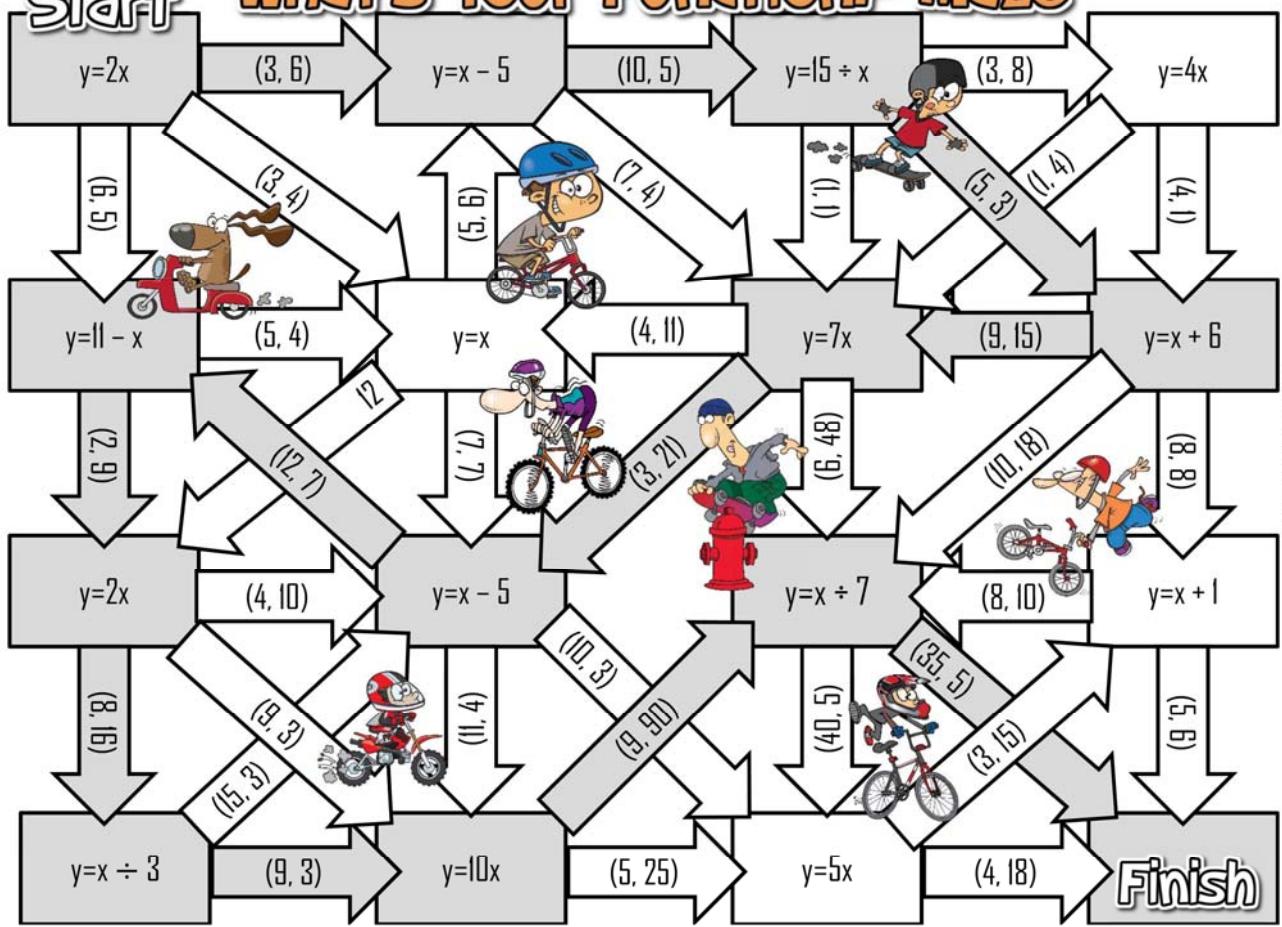

Maze: What's Your Function?

What's Your Function? Maze

©MATH IDEA GALAXY

Pg 217 #7 term1 term2 ...
 Pattern: 7, 16, 25 ...

a) Make a table of values for the 1st 5 terms

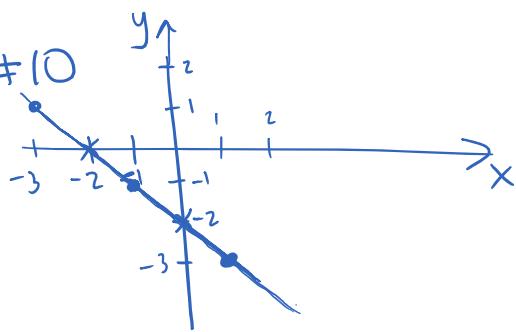

b) Create an equation $V = \underline{\hspace{2cm}}$

c) Value⁽ⁿ⁾ of the 123rd term

d) Which term⁽ⁿ⁾ has a value of 358?

n	V

Pg 227 #10
 (changed)

a) What is the approximate value of the y-coordinate when $x = 1$

b) What is the approximate value of the x-coordinate when $y = -3$

6.3 Horizontal and Vertical Lines

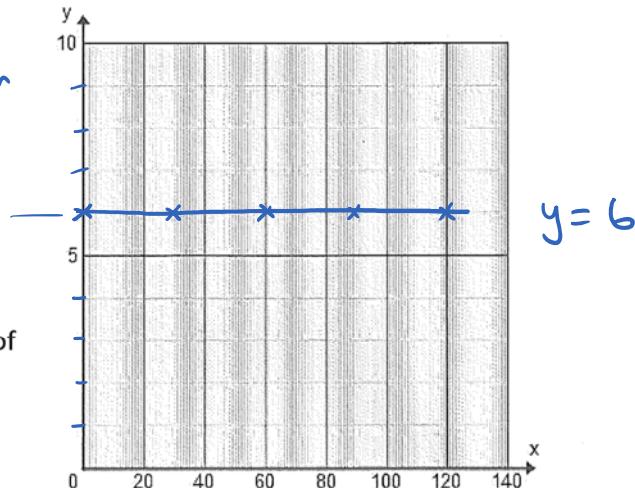

Table 1

	x	y
Time, t (s)	Distance, d (m)	
0	0	6
30	6	
60	6	
90	6	
120	6	

0 = common diff

a) Draw a graph to represent the table of values above. What do you notice?

horizontal line

b) The graph for table 1 could represent the distance between a pedestrian and a traffic light while they are waiting for a traffic light to change. What else could it represent?

anything that is sitting still relative to another object

c) The equation to relate the distance to the time in the previous table and graph is ...

$$d = 0t + b \quad d = b$$

OR

$$y = mx + b$$

$$d = 0t + b$$

$$d = b$$

$$\text{slope} = \frac{\text{rise}}{\text{run}} = \frac{0}{10} = 0$$

$$y - \text{int} = b = 6$$

a) Draw a graph to represent the table of values. What do you notice?

vertical line

$x = 1$
not if x is time

b) Does it make sense to describe a model for this situation? Why or why not? When would it be useful to be able to describe a vertical line in an equation?

b) Does it make sense to describe a model for this situation? Why or why not? When would it be useful to be able to describe a vertical line in an equation?

$y = \text{height}$
 $x = \text{distance moved horizontally}$

elevator, tree growing

c) What is the equation for the above table and graph?

~~Homework:~~

1) On the grid below graph all the following lines and label them:

\checkmark 1. $x = 1$ *axis crossed* *where crosses*

\checkmark 2. $y = 1$

\rightarrow 3. $x = 4$

4. $y = 3$

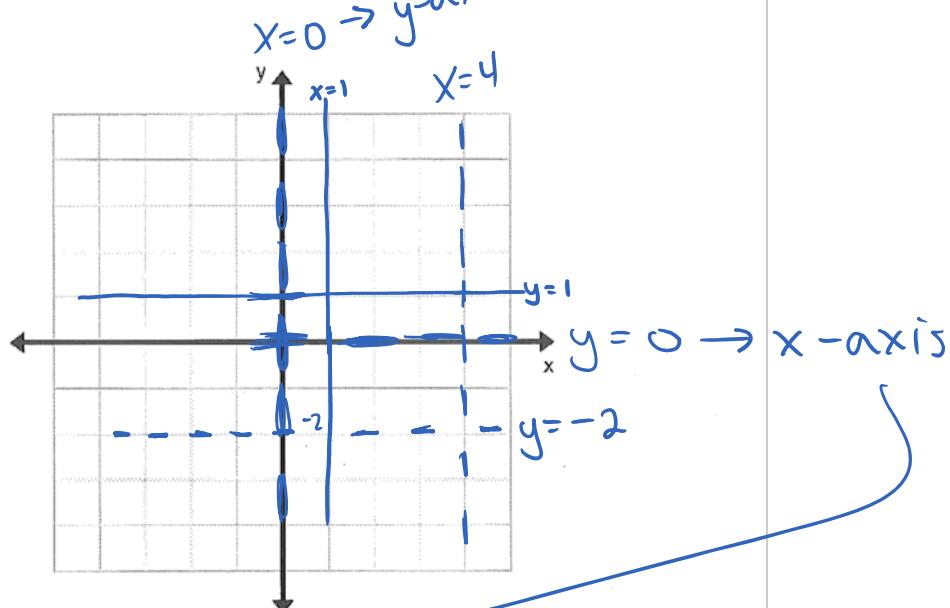

5. $x = -1$

\rightarrow 6. $y = 0$

\rightarrow 7. $x = 0$

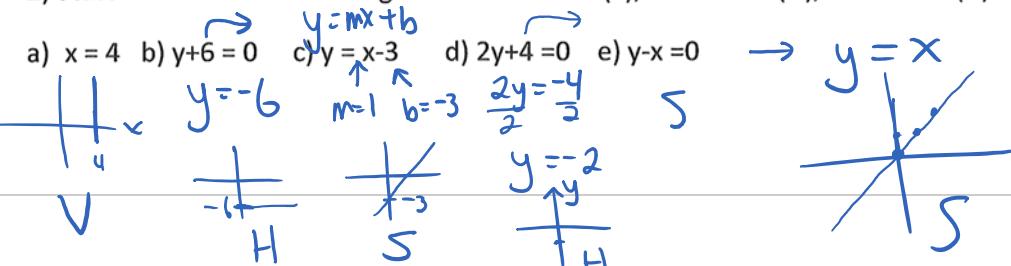

\rightarrow 8. $y = -2$

9. $x = -3$

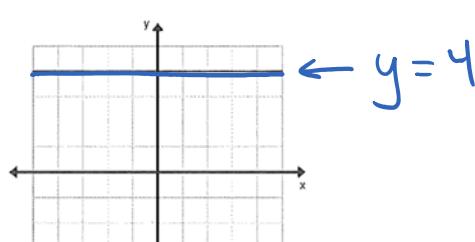

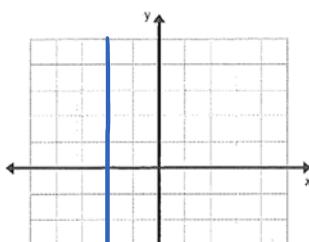

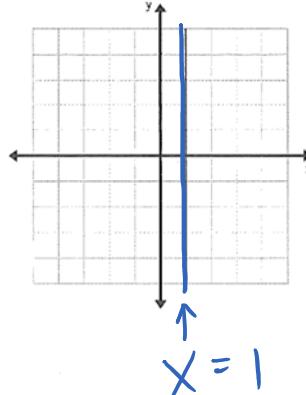

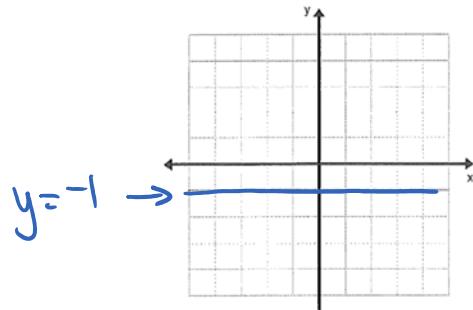

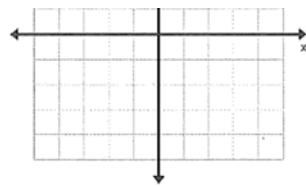

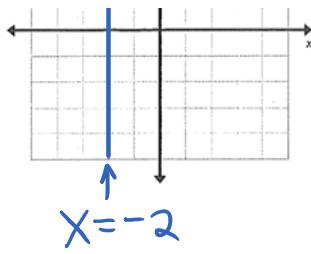

What are the special names for # 6 and # 7 ?

2) State whether the following lines are slanted (S), horizontal (H), or vertical (V):

Write the equations for the following graphs:

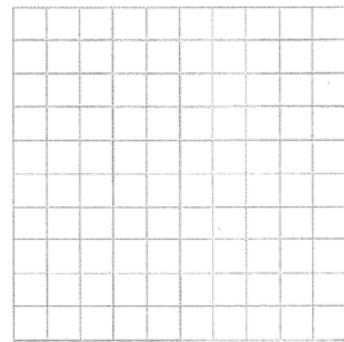

Stop

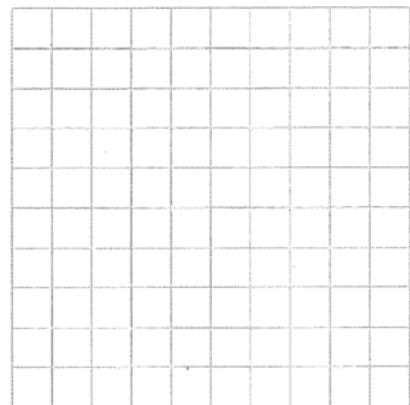

Review Practice:

1. For each linear equation, create a table of values and a graph.

a) $b = 3a - 2$

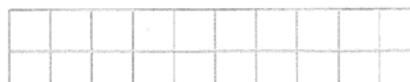

b) $t = -2$

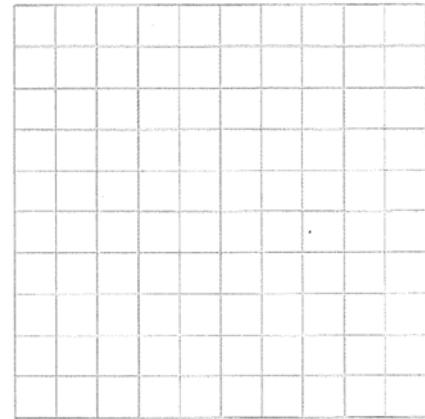

2.

a) Create a graph and a linear equation to represent each table of values

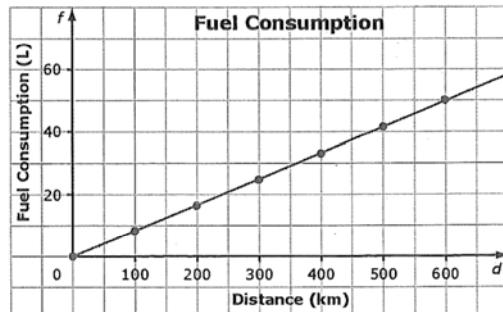

a) Create a graph and a linear equation to represent each table of values

x	-2	-1	0	1	2
y	4	4	4	4	4

3. The graph shows the relationship between the fuel consumption, f , in litres (L), and the distance driven, d , in kilometres (km).

a) What is the linear equation?

b) How far could you drive with 34 L of gas?

c) Is it appropriate to interpolate or extrapolate values on this graph? What assumption is being made? Explain.

6.4 Graphing Linear Relations

- Creating a Graph from an equation

Ex. When Bill walks at the speed of 3km/h, the distance d he covers (in km) is related to the number of hours h he walks with the equation: $d=3h$.

d) Create a table of values for the first 3 hours, and use it to graph this relation.

e) Extrapolate on the graph to determine the distance that Bill will walk after 4 hours.

f) Use the equation to determine how long it would take Bill to walk 21 km at the same rate (speed).

- Writing an Equation From a Linear Graph *(graphs drawn in on handouts)*
Ex. Write an equation for the relation shown on the graph below:

- Special Lines: Horizontal and Vertical

Ex. State whether the following lines are slanted (S), horizontal (H), or vertical (V):

b) $x = 4$ b) $y+6 = 0$ c) $y = x-3$ d) $2y+4 = 0$ e) $y-x = 0$

Homework: p. 239 #5(b), 6, 7a, 10(a), 11(a, b), 12(a, c)

Practice Test pg 246 #1-9

Chapter 6 Review

Key Words

For #1 to #5, unscramble the letters for each term. Use the clues to help you.

1. R A N E I L R A I N E T L O

a pattern made by a set of points that lie in a straight line when graphed

2. P L E X A T R O T E A

estimate values beyond known data

3. T S T O N C A N

in $y = 4x + 3$, the number 3 is an example

4. E L I N A R Q U E I O N A T

an equation that relates two variables in such a way that the pattern forms a straight line when graphed

5. T R I P O L E N E A T

estimate values between known data

6.1 Representing Patterns, pages 210–219

6. a) Make a table of values for the toothpick pattern.

Figure 1 Figure 2 Figure 3

b) Describe the pattern.

c) Develop an equation relating the number of toothpicks to the figure number.

d) How many toothpicks are in Figure 10? Verify your answer.

e) How do the numerical values in the equation represent the pattern?

7. Derek has \$56 in his bank account. He plans to deposit \$15 every week for a year.

a) Create a table of values for his first five deposits.

b) What equation models this situation?

c) How much money will Derek have in his account after 35 weeks?

d) How long will it take him to save \$500?

8. Taylor works at a shoe store. She makes \$50 per day plus \$2 for every pair of shoes she sells.

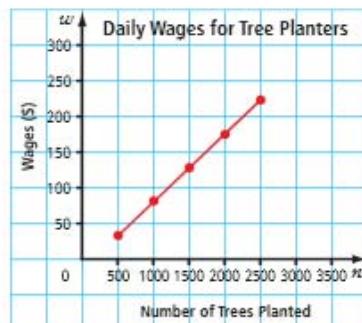

a) Create a table of values to show how much she would earn for selling up to ten pairs of shoes in one day.

b) Develop an equation to model this situation.

c) How much money will Taylor make in a day if she sells 12 pairs of shoes? Use two methods for solving the problem.

6.2 Interpreting Graphs, pages 220–230

9. Many tree planters are paid according to how many trees they plant. The following graph shows the daily wages earned at a rate of \$0.09 per tree planted.

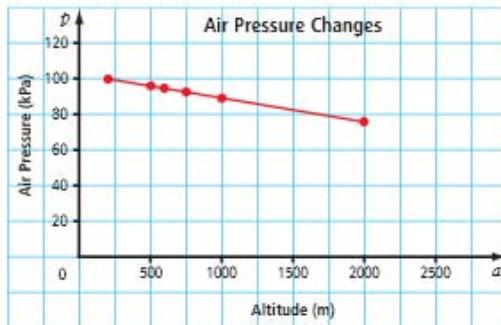

a) Approximately how much would a tree planter who planted 750 trees earn in one day?

b) In order to earn \$250 in one day, approximately how many trees would a planter need to plant?

10. The graph shows the relationship between air pressure, in kilopascals, and altitude, in metres.

a) What is the approximate air pressure at an altitude of 1500 m? 2400 m?
 b) Approximately at what altitude is the air pressure 90 kPa? 60 kPa?
 c) Does it make sense to interpolate or extrapolate values on this graph? Explain.

11. There are 15 schools in an urban school district. The table shows data about the student and teacher populations for eight of the schools.

Students	100	250	300	450	700	150	1025	650
Teachers	9	15	17	23	33	11	46	31

a) Graph the relationship between the number of students and teachers.
 b) How many teachers might be in a school that has 850 students? 1200 students?
 c) How many students might attend a school that employs 30 teachers? 50 teachers?

6.3 Graphing Linear Relations, pages 231–243

12. The cost of renting a snowboard can be calculated using the equation $C = 40 + 20d$, where C is the rental cost, in dollars, and d is the number of rental days.

a) Graph the linear relation for the first five days.

b) From the graph, what is the approximate cost of renting the snowboard for one day? seven days?
 c) If buying a snowboard costs \$300, use your graph to approximate how many days you could rent a board before it becomes cheaper to buy it.
 d) Describe another method you could use to solve parts b) and c).

13. Graph the linear relation represented in the table of values.

Time (h)	Distance (km)
0.5	52.5
1.0	105.0
1.5	157.5
2.0	210.0
2.5	262.5
3.0	315.0
3.5	367.5
4.0	420.0

a) Describe a situation that might lead to these data.
 b) Develop a linear equation to model the data.
 c) What do the numerical coefficients and constants in the equation tell you?

14. A parking lot charges a flat rate of \$3.00 and \$1.75 for each hour or part of an hour of parking.

a) Create a table of values for the first 8 h of parking.
 b) Graph the linear relation.
 c) Use the graph to approximate how much it would cost to park for 4 h.
 d) Using the graph, approximately how long could you park if you had \$15.25?
 e) What equation models this situation?

Try this:

CROSS OFF THE NUMBERS IN THE GRID

use:
 $n = 0, 1, 2, 3, 4, 5$

1	2	3	4	5
6	7	8	9	10
11	12	13	14	15
16	17	18	19	20
21	22	23	24	25

1. Cross off the numbers in the sequence $5n + 1$
2. Cross off the numbers in the sequence $5n - 2$
3. Cross off the numbers in the sequence $30 - 5n$
4. Cross off the numbers in the sequence $27 - 5n$
5. Cross off the numbers in the sequence n^2

What is the sum of the numbers left?

Ch 6 Review Notes

February 16, 2016 1:15 PM

1. C

2. B

3. C

4. $y = 2.5$

5. $x = 4.5$

6 a)

x	y
1	-2
2	-6
3	-10
4	-14
5	-18

b) $d = -4$

calc dx

$$dx \pm \frac{y}{-4x+2} = y$$

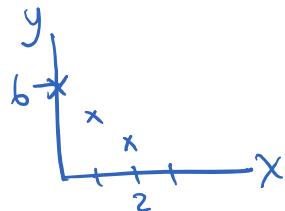

c) $-4(11) + 2 = y$
 $y = -42$

7. a) \$32

b) no - unless they charge for part toppings.

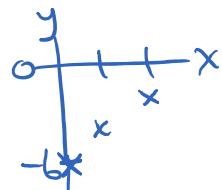

8 a) $y = -2x + 6$

x	y
0	6
1	4
2	2

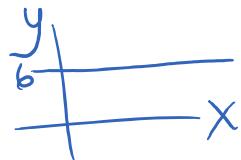

b) $y = 2x - 6$

x	y
0	-6
1	-4
2	-2

c) $y = 6$

x	y
0	6
1	6
2	6

Test (for going over later)

Chapter 6: Linear Relations Test

Name _____

1. Which equation best represents the relationship between the number of matches, m , and the figure number, f ?

Prove that your answer is right.

A $m = f + 3$ **B** $m = f + 12$
C $m = 4f - 3$ **D** $m = 12f - 8$

2. Which table of values best represents this graph of a linear relation?

A

x	y
-2	0
0	3
2	6
4	9

B

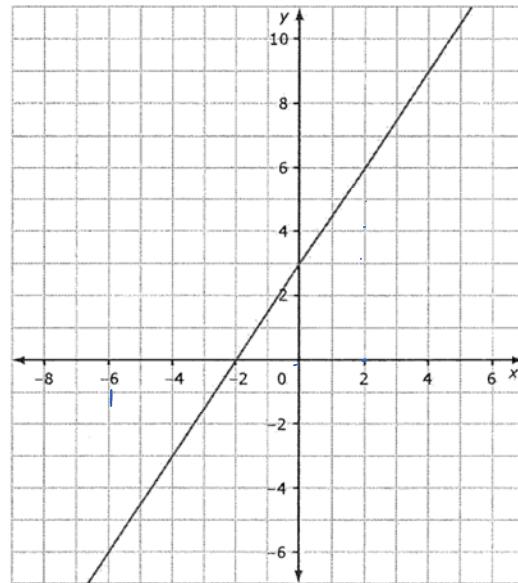

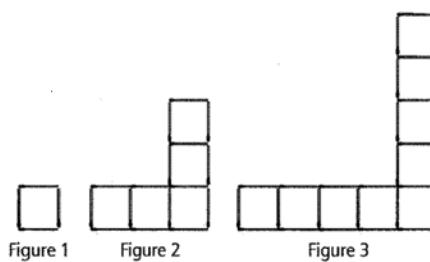

x	y
-2	0
0	3
2	-6
4	-9

C

x	y
-2	0
0	3
2	9
4	27

D

x	y
-2	0
0	3
2	-9
4	-27

Complete the statements in #3 and 4, using the graph in #2.

3a. When $x = 5$, the approximate y -coordinate is _____. (show the answer on the graph).

3b. When $y = -6$, the approximate x -coordinate is _____. (show the answer on the graph).

4. Draw $y=6$ onto the graph above.

5. The yearbook committee is pricing the yearbook. The printing company charges a flat fee of \$7 per book plus \$0.03 per page. Write a linear equation to represent the relationship between the number of pages in the yearbook and its cost. What is a cost of a book with 234 pages? (2 marks)

6. Amanda works as a waitress. She earns \$50 a day plus 75% of the tips her customers leave. (The rest of the tips go to the kitchen staff and bussers.) The table of values represents Amanda's earnings on different days.

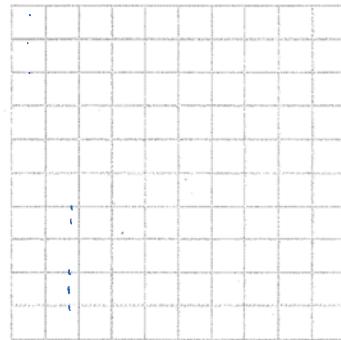

Tips (\$)	Total Earnings (\$)
20.00	65.00
50.00	87.50
100.00	125.00

a) Write a linear equation that represents the relationship between earnings and tips. (1 mark)

b) Verify the equation (*use values from the table*). (1 mark)

7. Alex runs at an average speed of 6 km/h. The equation relating distance, d , and time, t , is $d = 6t$.

a) Label and graph the linear relation. (2 marks)

b) Use the graph to estimate how long it takes Alex to run 10 km. (1 mark)

8. Debra plans to set up tables in the library for orientation day. Each table can seat **five** students. The tables can be connected end to end as shown.

a) Write a linear equation to represent the relationship between the tables and the number of seats.

b) How many students can sit at nine tables?

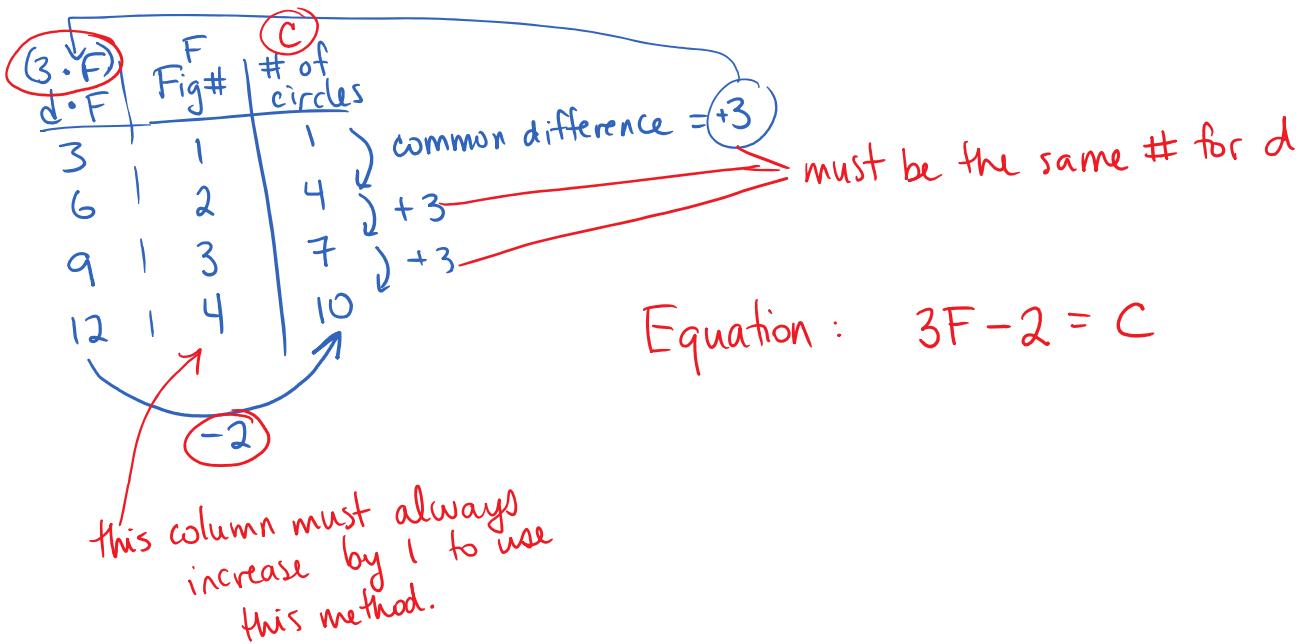

c) How many tables are needed to seat 50 students?

d) How many tables are required to seat 52 students? Explain your answer.
